

HISTORIC LANDMARKS COMMISSION GENERAL DESIGN GUIDELINES & MEETING PROCEDURES

Prepared By
COMMUNITY DEVELOPMENT DEPARTMENT
CITY OF SANTA BARBARA
CALIFORNIA

(Originally adopted as "HLC Rules & Procedures" May 16, 1995)

Revised December, 2011

Printed May, 2012

HISTORIC LANDMARKS COMMISSION GOALS

The Historic Landmarks Commission (HLC) is guided by a set of general goals that define the major concerns and objectives of its review process. These goals are:

- A. to safeguard the heritage of the City by providing for the protection of landmarks representing significant elements of its history;
- B. to enhance the visual character of the City by encouraging and regulating the compatibility of architectural styles within historic districts reflecting unique and established architectural and landscaping traditions to ensure they are integrated into their specific cultural landscape;
- C. to foster public appreciation of and civic pride in the beauty of the City and the accomplishments of its past;
- D. to strengthen the economy and vitality of the City by protecting and enhancing the City's attractions to residents, tourists and visitors;
- E. to promote the private and public use of landmarks and historic landmark districts for the education, prosperity and general welfare of the people;
- F. to stabilize and improve property values within the City;
- G. to undertake the identification, inventory, and consideration of those structures, sites and natural features within the City which may merit designation as a City Historic Resource in accordance with the Historic Resource criteria established by state Public Resource Code §5024.1, as it is presently enacted or hereinafter amended;
- H. to promote high standards in architectural and landscape design and the construction of aesthetically pleasing structures;
- I. to promote neighborhood compatibility; and
- J. to ensure that the review process is fair and consistent both in policy and implementation to allow all who are involved to benefit from the process.

1.6.1 Requirements25

1.6.2 Recommended Project Aspects.....26

PART II LANDSCAPE DESIGN GUIDELINES

INTRODUCTION29

Purpose of the Landscape Design Guidelines.....29

Relationship to Santa Barbara General Plan and Coastal Plan.....29

Relationship to the Santa Barbara Zoning Ordinance29

Basis for HLC Landscape Design Guidelines29

Relationship to City Water Conservation Programs.....30

Relationship to City Creeks Programs30

Guideline Organization30

**SECTION 1 Landscape and Irrigation Plan Applicability, Licensing and
Submittal Requirements**

2.1.1 Landscape Plans.....30

2.1.2 Licensing Requirements31

SECTION 2 General Guidelines

2.2.1 Site Layout and Massing.....33

2.2.2 Plant Selection34

2.2.3 Sustainability Principles35

2.2.4 Street and Driveway Design36

2.2.5 Parking Lots37

2.2.5 Tree Root Barrier Guideline.....38

**SECTION 3 Additional Guidelines for Commercial/Industrial, Multi-Family
and Residential Projects**

2.3.1 Commercial/Industrial/Institutional38

2.3.2 Multi-Residential38

2.3.3 Two-Family (R-2) Zone39

SECTION 4 Tree and Vegetation Preservation

2.4.1	General	39
2.4.2	Projects Proposing Tree Removal	39
2.4.3	Tree Removal and Replacement Permits: Lots Developed with Multi-Family Residential, Commercial, or Industrial Uses	41
2.4.4	Tree Removal and Replacement Permits: Lots Developed with Single-Family Residential or Duplex Uses	41
2.4.5	Tree Removal Permits Exception	42
2.4.6	Landscape Removal and Replacement Permits	42
2.4.7	Hillside Design District Vegetation Removal: Vegetation Removal Ordinance and Neighborhood Preservation Ordinance (NPO)	42
2.4.8	Definitions	43

SECTION 5 Special Areas

2.5.1	Hillside Residential Landscape Design	45
2.5.2	Creeks, Water Courses and Wetlands	46
2.5.3	High Fire Hazard Area Landscape Design	46

PART III MEETING PROCEDURES

SECTION 1 Introduction, Interpretation and Application 49

SECTION 2 General Information and Procedures 49

3.2.1	General Information	49
	A. Meeting Dates and Location	
	B. Applications and Filing	
	C. Licensing Advisory	
	D. Application Completeness	
	E. Notice and Posting	
	F. Fees	
	G. Staff Contact	
3.2.2	Agenda Organization	51
	A. General Business	
	B. Discussion Items	
	C. Cultural Resource Studies	
	D. Appeals	
	E. Concept Review	

F.	Project Design Approval	
G.	In-Progress Review	
H.	Final Approval	
I.	Review After Final Approval	
3.2.3	Notices	52
A.	Consent and Full Commission Items	
B.	Pre-HLC Review Applicant Workshop	
3.2.4	Project Presentation/Plan Substitution	52
A.	Plan Presentation	
B.	Plan Substitution	
3.2.5	Public Hearings and Public Comments	53
3.2.6	Review Levels	54
A.	Concept Review	
B.	Planning Commission Comments	
C.	Project Design Approval	
D.	In-Progress Review	
E.	Final Approval	
F.	Review After Final	
G.	Consent Calendar	
H.	Minor Projects Eligible for Administrative Staff Approval	
I.	Construction Without Permit (“As-Built”)	
3.2.7	Procedure for Continuances, Postponements, Referrals and Absences	57
A.	Continuances	
B.	Postponements	
C.	Referral from Consent Calendar to Full Commission	
D.	Absences at Consent Calendar	
3.2.8	Decisions	58
A.	Project Compatibility Analysis	
B.	Findings to Approve a Project	
C.	Findings to Approve a Project - Single Family Residence	
D.	Project Denials	
3.2.9	Action, Appeals, and Expiration of Approval	58
A.	Time Limits on Approvals	

B.	Time Extensions	
C.	Appeal of HLC Decision	
D.	Re-Filing a Denied Project Design	
E.	Appeal of Sign Committee Decision	
3.2.10	Plan Check and Building Permit	61
A.	Cursory Plan Review	
B.	Preliminary Plan Review	
C.	Building Plan Check	
D.	Building Permit	

SECTION 3 Jurisdiction

3.3.1	HLC Jurisdiction—General	61
3.3.2	HLC Jurisdiction—Single Family Residential.....	63
3.3.3	Scope of Project Review	63
A.	Standard Review	
B.	Focused Review	
3.3.4	Subdivision Grading Plans.....	65
3.3.5	Signs.....	66

SECTION 4 Meeting Conduct

3.4.1	General Procedures.....	67
A.	Robert’s Rules of Order	
B.	Discussions Outside of Regularly Noticed Meetings	
C.	Quorum	
D.	Abstention on Continued Items	
E.	Reconsideration	
F.	Brown Act Meeting Rules	
G.	Conflict of Interest	
H.	Staff Assistance	
I.	HLC Member Attendance	
J.	HLC Member Compensation	
K.	HLC Member Site Visits	
L.	Story Pole Requirements	
3.4.2	Officer Election.....	69
A.	Chairperson	
B.	Vice Chairperson	

3.4.3 Subcommittees/Advisory Committees 69

SECTION 5 Single-Family Submittal Requirements 69

SECTION 6 Visual Aids, Including Story Poles

3.6.1 Purpose 70

3.6.2 Definition 70

3.6.3 When Required 70

3.6.4 Other Visual Aids 70

- A. Photo Simulations
- B. Three-Dimensional Massing Model
- C. Perspective Drawings
- D. Rendered Streetscape Elevations
- E. Comparative Building Study
- F. Size, Bulk and Scale Analysis Tools

APPENDICES

Appendix A: Landscape Design Standards for Water Conservation 73

Appendix B: High Fire Hazard Area Landscape Guidelines 77

Appendix C: List of Invasive Plants (California Exotic Pest Plant Council) 83

Appendix D: List of Recommended Parking Lot Trees..... 89

INTRODUCTION

Purpose of the Historic Landmarks Commission General Design Guidelines & Meeting Procedures

These “Historic Landmarks Commission (HLC) Guidelines & Meeting Procedures” have been developed to:

1. Ensure high design standards are maintained and applied in all areas under the jurisdiction of the HLC in regards to the development and construction process.
2. Clarify the goals and policies of the HLC for the understanding of the public and those who enter into the applicant process.

In addition to these HLC General Design Guidelines & Meeting Procedures, there are other design guidelines found in other documents that may apply to projects within the jurisdiction of the HLC. The El Pueblo Viejo Design Guidelines are the foundation document establishing the Historic Landmarks Commission’s criteria for appropriate development in El Pueblo Viejo Landmark District as well as for structures which have been deemed historic or listed on the City’s Potential Historic Resources List. Other design guidelines provide additional information for some projects in certain areas of the City, including special districts and for outdoor lighting standards. These HLC General Design Guidelines & Meeting Procedures contain administrative review criteria, landscaping standards, and meeting procedures.

HLC Background and Purpose

- **Background.** The city of Santa Barbara was one of the first communities in the United States to conceive of historic preservation as an integral element in the planning process. At first, this concept was pursued by civic groups -- The Plans and Planting Committee of the Community Arts Association and the Architectural Advisory Committee -- both of which were formed in 1922. Their efforts were augmented in 1923 by the official establishment of a City Planning Commission, and in 1925, by the organization of a City Architectural Board of Review, which lasted nine months. In 1947, a new City Architectural Board of Review (ABR) was founded. In 1960, the Advisory Landmark Committee was formed to aid in the review procedure for the newly-created El Pueblo Viejo Landmark District. In 1977, with the adoption of a new Historic Structures Ordinance, the Advisory Landmark Committee was replaced by the Landmarks Committee. In November 1993, the City Charter was amended to create the present Historic Landmarks Commission (HLC) and to expand the boundaries of El Pueblo Viejo Landmark District. The charter amendment also revised the duties of the ABR to make it clear that its jurisdiction excluded applications subject to review by the Historic Landmarks Commission. The HLC consists of nine members, two of whom must be licensed architects, one a professional architectural historian, one a landscape architect, and at least one public at large member. The commission members must have a demonstrated interest in and knowledge of the history and architecture of the City of Santa Barbara.
- **Purpose of HLC.** According to the city of Santa Barbara Municipal Code (SBMC) one of the primary purposes and objectives of the HLC is to safeguard the heritage of the City by providing for the protection of historic resources as outlined in (Chapter §22.22, Historic Structures Ordinance). In support of this objective, the HLC was established pursuant to §817 of the Charter of the City of Santa Barbara.

Guideline Interpretation and Application.

The HLC is guided by a set of general goals that define the major concerns and objectives of its review process. These goals are listed on the inside of the cover of this document. These guidelines help to define how HLC carries out the goals.

These guidelines are designed to guide the HLC members and the public as a whole; they are not intended to be binding in nature. Although failure to meet the Guidelines can form a basis for denial of the design of a project, non-compliance with these guidelines shall not be grounds to invalidate any action taken by the HLC, nor shall such non-compliance constitute a cause of action against the City or its officers, employees or agents concerning any matter.

Relationship to Other Documents

- **Relationship to the General and Coastal Plans.** The Santa Barbara General Plan contains policies and direction regarding the visual aspect of development, neighborhood compatibility and landscaping. The Zoning Ordinance and these HLC General Design Guidelines & Meeting Procedures are intended to implement the General Plan and Coastal Plan policies. The General Plan contains descriptions of the character of individual neighborhoods and sets a vision for individual sustainable neighborhood features, community design, and historic preservation.
- **Relationship to Zoning Ordinance.** The Zoning Ordinance contains standards with which development must comply. In the event of a conflict between these guidelines and the Municipal Code, the Code requirements prevail over these guidelines. These Guidelines are intended to augment the Municipal Code by providing complementary detail on the topics discussed.
- **Relationship to Other Design Guidelines** A number of other City design guidelines provide direction regarding architectural appearance, site design and landscaping. The other guidelines are listed below as “other city design guidelines.” These HLC General Design Guidelines & Meeting Procedures are generally compatible with the other design guidelines and are more detailed on some subjects than the other design guidelines. However, if these “HLC General Design Guidelines & Meeting Procedures” and other design guideline address the same issue, the other design guidelines applicable to the specific area or topic shall prevail over these “HLC General Design Guidelines & Meeting Procedures”.
- **Relationship to the Master Environmental Assessment.** The City of Santa Barbara Master Environmental Assessment (MEA) document provides guidelines for preparation of cultural resource studies. The city’s MEA document provides procedures to ensure that city projects comply with California Environmental Quality Act (CEQA) review requirements. In some cases, a project may require design changes or monitoring to avoid or lessen potential effects to archaeological and historical resources.
- **Relationship to Neighborhood Preservation Ordinance (NPO).** The NPO requires HLC review and approval for certain single-family residential projects and other grading or alterations proposed within single-family zones. (See SBMC §22.69.020 for a specific list of projects requiring review and approval by the HLC.)

Guideline Organization

These HLC General Design Guidelines and Meeting Procedures are divided into three main parts. Part I contains information about processing applications for properties with historic structures, sustainable building and site design information, and administrative staff level project approval criteria. Part II contains landscape design guidelines for projects that require landscape plans. Part III provides background information and explains the HLC's meeting and review process and Staff's role in HLC agenda preparation.

Other City Design Guidelines

In addition to these HLC General Design Guidelines & Meeting Procedures, other guidelines for specific types of development and for specific areas of the City have been prepared with input from the Historic Landmarks Commission, Architectural Board of Review, Planning Commission, and others. The other city design guideline documents cover commercial, multi-family and single family development. Other City design guidelines include the following:

- **Chapala Street Design Guidelines.** The City of Santa Barbara Redevelopment Agency initiated the Chapala Street Design Guidelines in May 2003 to ensure that public improvements that occur as a result of private sector development of the Chapala Street corridor consisted of a unified theme that met the needs of current downtown residents and businesses. The Chapala Street Design Guidelines influence that area of Chapala Street south of Carrillo Street and north of Hwy 101.
- **El Pueblo Viejo Design Guidelines.** The purpose of these design guidelines is to preserve and enhance the unique heritage and architectural character of the central area of the City which developed around the Royal Presidio, founded in 1782, and which contains many of the City's important historic and architectural landmarks. The design guidelines also address the area around Santa Barbara Mission. These guidelines are also utilized for all projects and are the primary supplemental design guidelines to consider when designing projects in the EPV district.
- **Haley-Milpas Design Manual.** The purpose of these guidelines is to assist the public in the Haley-Milpas area in improving the appearance of their properties. Goals in this area are to provide a more human-scaled and pedestrian environment; to give more attention to details to provide more interest and feeling; and to encourage mixed-use development to accommodate the mix of uses already existing in the area. U.S. Highway 101, Santa Barbara, Ortega, Salsipuedes and Haley Streets, and the properties facing Milpas Street bound this area.
- **Highway 101 Santa Barbara Coastal Parkway Design Guidelines.** The purpose of the Highway 101 Santa Barbara Coastal Parkway Design Guidelines is to preserve the historic character and visual quality of the segment of Highway 101 located within the City's Coastal Zone. The guidelines are intended to help the City, the California Department of Transportation (Caltrans) and other interested agencies maintain this segment of highway in a manner consistent with its historic character while allowing for necessary traffic and safety improvements to maintain access through the City's Coastal Zone. Additionally, these guidelines are referred to as part of Caltrans courtesy reviews for their projects in other areas of the city.

- **Lower Riviera Special Design District Guidelines.** These guidelines direct development within and adjacent to the Bungalow District to be compatible with the architectural character of the Bungalow District. The Guidelines assist property owners, architects, contractors, and hearing review bodies in designing projects that will be appropriate, compatible, and beneficial to the Bungalow District and to assist the City in reviewing applications for new projects and alterations to structures within, and in close proximity to, the Bungalow District.
- **Outdoor Lighting and Streetlight Design Guidelines.** These guidelines itemize acceptable standards for outdoor lighting installations throughout the City. The guidelines recommend specific outdoor lighting design standards to avoid excessive glare.
- **Passive Solar Design Guidelines and Recognition Program.** The best way to reduce energy consumption is through conservation. The Passive Solar guidelines encourage building siting, orientation, materials, construction techniques, and landscaping to reduce long-term energy needs for new developments.
- **Sign Review Guidelines:** These guidelines itemize acceptable standards for the placement of signs throughout the City. The guidelines describe specific points of Sign Committee review which promote aesthetic signage and graphic design that enhances the architectural style or historical quality of a building.
- **Single-Family Residence Design Guidelines.** These guidelines apply to single-family houses constructed or altered in the Hillside Design District and to certain houses outside of the Hillside Design District. (See SBMC §22.69.020 for a specific list of projects requiring review and approval by the HLC.) The purpose of these guidelines is to assist applicants and designers to design homes and additions that are compatible with existing neighborhoods.
- **Solar Energy System Design Guidelines and Recognition Program.** This document specifies how to achieve a solar energy system that is high performing as well as aesthetically well integrated with its surrounding location, and therefore eligible for a recognition award from the city of Santa Barbara.
- **State Street Landscape Design Guidelines:** These guidelines are intended to give direction to private property owners along the State Street Downtown Plaza regarding voluntary alterations to the streetscape for landscaping in front of their property. The guidelines were created in order to assure that any changes to the twelve blocks of the State Street Downtown Plaza that do occur are harmonious with the surrounding context and contribute to the overall improvement of the plaza.
- **Upper State Street Area Design Guidelines.** At the time of adoption of these HLC General Design Guidelines & Meeting Procedures in 2011, no structures were designated with historic significance in the Upper State Street Area (USSA), an area generally on both sides of State Street from Constance Avenue to the westerly City limits. It also includes upper De La Vina Street from Constance Avenue to State Street; commercially developed areas along Hope Avenue, Hitchcock Way and La Cumbre Road; and the commercial areas along Calle Real and Pesetas Way. However, should structures with historic components be reviewed by the HLC in the future, these guidelines would apply to projects in the USSA.

- **Urban Design Guidelines.** These guidelines apply to the urban grid area of the City. The intent of the guidelines is to ensure that traditional design principles and pedestrian-friendly design concepts are incorporated into development proposals. The guidelines provide design criteria illustrations for design professionals, the public, and to allow the HLC to evaluate development proposal consistency with appropriate design principles.
- **Waterfront Area Design Guidelines.** These guidelines establish a general design theme which emphasizes the area's proximity to the ocean and harbor areas. These guidelines apply to all property in the area of the harbor and Pershing Park, as well as properties south of U.S. Highway 101 between Castillo Street on the west and the City limits on the east.
- **Wireless Communication Facilities/Antenna Design Guidelines.** These guidelines establish design standards for the screening, location, and appearance of wireless communication facilities to minimize adverse visual impacts related with these installations.

Federal and State Standards and Codes

In addition to these HLC General Design Guidelines & Meeting Procedures and other city design guidelines, federal and state guidelines often guide development where historic resources are present. Following federal and state guidelines often contributes to compliance with the California Environmental Quality Act.

- **Secretary of the Interior's Standards for the Treatment of Historic Properties.** This federal document sets forth standards for the treatment of historic properties and preservation. The document contains standards for historic structure preservation, rehabilitation and reconstruction.
- **State Historic Building Code.** This state document provides alternative building regulations and standards for the rehabilitation, preservation, restoration, or relocation of buildings or structures designated as historic. The intent of this document is to aid in the preservation of designated historic buildings while providing reasonable safety from fire, seismic forces, or other hazards for occupants of such buildings, and to provide reasonable accessibility to, and usability by, the physically handicapped.
- **Manufactured Homes.** According to Govt. Code §65852.3, any architectural requirements imposed on a manufactured home certified under the National Manufactured Housing Construction and Safety Standards Act of 1974 (42 U.S.C. Secs. 5401 et seq.) on a foundation system, pursuant to §18551 of the Health and Safety Code, on lots zoned for conventional single-family residential dwellings **are limited to its roof overhang, roofing material and color, and siding material and color.** Such homes are subject to the same zoning standards that a conventional single-family home on the same lot would be subject to. See Government Code §65852.3(b) for exemptions for projects with historical interest or value on a site.

PART I

GENERAL ARCHITECTURAL DESIGN GUIDELINES

See pages 2 – 4 in the Introduction to this document for an explanation of how these general HLC architectural design guidelines relate to area or topic specific design guidelines, such as the El Pueblo Viejo Design Guidelines.

SECTION 1 Historic Significance – All Structures and Sites

Potential historic significance of existing structures should be researched and plans should show consideration for these elements if they exist on the site. Evaluation and protection of archaeological or historic resources are governed by policies, laws and regulations of the municipal code and at the state and federal levels. Existing historic structures and site features such as walls, stairways, and gates should be preserved and included as a part of the overall plan where feasible. Consultation with the City's Urban Historian is recommended for demolition or substantial alterations proposed for structures over 50 years of age.

SECTION 2 Sustainable Building and Site Design, Including Energy Efficiency

The built environment has a profound impact on our natural environment, economy, health, and productivity. Building sustainably is a design and construction method that recognizes this impact and focuses on creating buildings that minimize the impact on the environment, while positively affecting the economy and the health of the building occupants. To address these impacts, building sustainably focuses on four major components:

- Energy and Water Conservation
- Site Planning
- Material and Resource Use Reduction
- Indoor Air Quality
- Improvements

Building sustainably is encouraged as much as possible when consistent with HLC goals for historic preservation.

1.2.1 Energy Efficiency. Buildings shall be designed and oriented to maximize energy efficiency and conservation, including lighting design. Feasible passive and active solar design principles are encouraged.

1.2.2 Sustainable Building and Site Design. City policies support building designs that incorporate sustainable building and site design principles and use energy efficiently. It is consistent with the intent of these guidelines to encourage the continued effort to build in a manner responsive to the environment. Difficulty arises with the incorporation of materials and elements such as solar collectors, cool roofs, and reflective glass which are otherwise incompatible with historic preservation goals. The designer is challenged to either:

- incorporate sustainable elements in a manner which is unobtrusive or invisible (preferred); or
- incorporate sustainable elements in a manner which is appropriate to the style.

For either approach, the designer needs to consider these concepts at the beginning of the conceptual design phase as an integral part of the scheme, rather than as an afterthought or added element.

Property owners and designers should consider adaptive reuse and rehabilitation as viable alternatives to demolition and redevelopment of existing facilities. The rehabilitation of historic structures often demonstrates a large commitment to saving the history of the community through historic preservation.

Additions, exterior alterations, and remodels should strive to be both aesthetically appropriate and sustainable. The potential benefits and sustainability advantages for adaptive reuse and rehabilitation projects are as follows:

- Reduction of resources used in construction
- Significant reduction in the amount of demolition waste going to landfills
- Reuse of existing buildings may often be greener than building new “green” buildings, given the amount of energy required to construct new buildings
- Use of long-lasting traditional building techniques and materials is superior to potentially lower-quality or cheaper, modern materials
- More sustainable landscape, drainage, and irrigation systems

Also consider the following sustainable landscaping topics, described in more detail in Part II of these guidelines:

- Effective on-site stormwater management and runoff reduction
- Maximum on-site permeability and percolation
- Water-wise plant choices and water-efficient irrigation
- Preservation of existing vegetation
- Avoiding unnecessary grading
- Use of landscaping to buffer wind and sun
- Natural drainage features

SECTION 3 Administrative Approval Standards

Various HLC review levels include: concept, project design approval, in-progress, final approval, review after final approval and consent calendar. These review levels are discussed in Part III: Meeting Procedures.

Projects Eligible for Administrative Staff Approval. Projects listed in Sections 3.2 and 3.3 of this Part I are eligible for administrative staff review and approval as a ministerial action by a Community Development Director appointed representative without full review by the HLC if the project complies with both “1.3.1 Administrative Staff Review Standards, General” and applicable project specific standards in 1.3.2 and 1.3.3.

Projects Not Eligible for Administrative Staff Approval

- Projects subject to public noticing per SBMC Chapter §22.22
- Designated City Landmarks
- Designated Structures of Merit

- Project structure is on the City's "List of Potential Historic Resources" or site is found to possess potential significant historic value as determined by a Community Development Director appointed representative (e.g., Urban Historian); and the proposed alteration may negatively alter a character defining feature or cause an adverse change to the significance of the resource. In this case, consultation with or approval by the Historic Landmarks Commission may be required.

1.3.1. **Administrative Staff Review Standards, General.** In order to be eligible for administrative staff review, a project must comply with the following general standards as well as any applicable project specific standards listed in 1.3.2 and 1.3.3.

- A. **Design:** The architectural design of the addition, alteration, or site change is compatible with the design of any existing building which will remain on site. One overall architectural style is required.
- B. **Materials:** The exterior finish materials of the proposed project match the existing exterior finishes of the existing structures on the lot.
- C. **Style:** Style is expressed through architectural elements such as windows, doors, lighting, railings, trim, eaves, roof pitch, element proportions, and materials. The style of the proposed work should be stated on the project plans and matches the existing style. Wherever this document references a requirement for style compatibility, the following method is used to determine style compatibility. Staff may reference A Field Guide to American Houses or similar reference materials to confirm the proposed style classification. Staff will check for consistency of style of a structure's proposed elements with the elements for the chosen style. Staff will also check that any patterns or materials created by the existing elements are repeated in the proposed work.
- D. **Additions:** Additions match the current architectural style of the building and are of the same materials, details and colors.
- E. **Alterations:** Alterations match the current architectural style of the building or result in one architectural style. Alterations to restore a structure's previous architectural style may be approved if the architectural style is appropriate for the district or the structure. Alterations that propose an architectural style that is not typical for the neighborhood are not eligible for administrative staff review.
- F. **Colors:** Additions match the existing colors of the building, siding or trim. Building alterations involving color changes may be re-painted or re-stained to match the existing colors of the structure, provided there is no change from the original color. Similarly, exterior building components may be repaired or replaced as long as the visual intent and color remain the same. Proposals for bright colors or colors that do not match the building require review and approval by the HLC. Simple color changes can be approved administratively where original colors are substituted with colors from an HLC-approved color palette, titled "Santa Barbara Colors", available at the Planning and Zoning Counter and on-line at:
www.santabarbaraca.gov/Resident/Home/Guidelines/
- G. **Scale:** The scale of additions is compatible with the scale and style of the building and neighborhood. The project scale is consistent with the prevailing

development patterns of neighborhood additions. The review criteria utilized to determine correct scale shall be the degree of project visibility, plate heights, roof pitch, and maximum building heights. Additions or alterations out of character with the neighborhood or incorrectly sited on the lot are referred to the HLC.

- H. **Historic Considerations:** Projects involving minor alterations to structures on the City's "List of Potential Historic Resources" or to other structures that are found to possess potential significant historic value as determined by a Community Development Director appointed representative (e.g., Urban Historian) may be ineligible for administrative staff review. Consultation or approval by the Historic Landmarks Commission may be required.

1.3.2 Administrative Staff Review Standards, Project Specific Standards: Commercial & Multi-Family

- | | |
|---|---|
| A. Additions: Minor | M. Mechanical Equipment: Rooftop |
| B. Awnings | N. Roofs (and "Reroofs") |
| C. Chimneys and Metal Flues | O. Shed and Spa Enclosures |
| D. Color Changes: Exterior | P. Sidewalk Seating for Commercial Outdoor Dining Areas |
| E. Decks: Minor Alterations | Q. Skylights |
| F. Doors: Minor Alterations | R. Soil Remediation Systems: Temporary (1 or 2 Year) |
| G. Driveways/Paving/Minor Sitework | S. Time Extension |
| H. Fences | T. Tree Removals: Minor |
| I. Landscape Alterations: Minor, Including Tree Removals. | U. Trellises |
| J. Landscape Improvements | V. Walls: Freestanding |
| K. Lighting: Exterior | W. Windows: Minor alterations |
| L. Mechanical Equipment: General | |

- A. **Additions: Minor.** Additions are under 100 square feet and do not have a publicly visible effect on the overall design of the building.
- B. **Awnings.** Small canvas awnings over window or door openings that are compatible with the style and the colors of the existing structure. Proposals for bright colors or colors that do not match the building require review and approval by the HLC.
- C. **Chimneys and Metal Flues.** All of the following standards must be met:
 1. Chimneys are consistent with the style of the existing structure and use masonry, stone, stucco, or metal pipe.
 2. Wood material is not used on chimneys.
 3. The shape of the chimney is fairly uniform, i.e. there is no awkward extensive projection of exposed pipe beyond the top of the chimney in response to Building and Safety requirements.

- D. **Color Changes: Exterior.** The project is consistent with 3.1.F “Administrative Staff Review Standards, General. Colors.”
- E. **Decks: Minor Alterations.** New or altered decks or porches less than 200 square feet or decks at the first floor level are eligible for administrative approval if the following standards are met:
1. New decks are of a scale and style which is compatible with the structure to which the deck is attached.
 2. When viewed from a public viewing location, the proposed deck is not likely to be more noticeable than the structure it is attached to.
 3. When viewed from a public viewing location, the proposed deck is not likely to be more noticeable than other decks on adjacent properties or in the immediate area if no decks are on immediately adjacent properties.
 4. New decks are not located to cause potential privacy or noise impacts to adjacent properties.
 5. Deck wood is proposed to be left in a natural condition to weather or is proposed to be treated with a neutral or wood color stain or sealer or painted to match the color of the existing structure or trim.
- F. **Doors: Minor Alterations.** Minor door alterations - for example, to enhance access by the physically challenged and for compliance with the Americans with Disabilities Act (ADA) - are covered by this provision. Installation of guard/hand rails shall be referred to the consent calendar. The modification of doors and sidelights within existing rough openings should be designed to comply with the following requirements for administrative approvals:
1. The type of proposed doors and color of frames are compatible with the architectural style of the building and appear compatible with existing doors.
 2. If the doors of an addition are the same size and material as existing nearby doors, the proposed doors match the existing nearby doors in appearance.
 3. Door and sidelight sash material match the existing and are either wood or traditional steel iron (aluminum, anodized or other shiny or unpainted metal is not allowed in El Pueblo Viejo).
 4. Where adjacent windows are "divided light" type, the new doors and sidelights shall also be divided to match the existing. Where dual glaze glass is used, the mullions should break the exterior pane.
 5. In door pairs, both doors should have the same width.
 6. In doors with sidelights, sidelights should have the same width if feasible.
 7. Doors and sidelights shall be placed symmetrically within architectural elements if appropriate for the architectural style.
 8. Door hardware is appropriate to the architectural style of the building.
 9. Any changes in paving material associated with the door alteration match the existing material.

- G. **Driveways/Paving/Minor Sitework.** Extensions, modifications, and additions to driveways where:
1. Grading total is less than 50 cubic yards.
 2. There is no drainage impact on adjoining lots.
 3. Any paving or driveway additions or modifications are of the same materials as the existing paving or driveway materials.
 4. Any new driveway paving materials are compatible with the existing structure and surrounding area.
 5. New paved parking areas are screened from public viewing areas through fencing, landscaping or other structures.
 6. Any construction of a driveway or sitework in close proximity to a creek or that may result in adverse drainage conditions is not eligible for administrative approvals.
- H. **Fences.** Chain link, chicken wire, metal, plastic, vinyl, wire-mesh and unfaced cement block fence materials are not eligible for Administrative Staff Review. Fences not specifically excluded in the preceding sentence may be reviewed and approved administratively if:
1. The fence is 8 feet or less in height.
 2. The fence is not in a highly visible location to the public as defined in Section 1.3.4.B.
 3. Lot Line Fences: Fence height, length and use of materials shall be compatible with the surrounding area.
 4. Wood fences constructed of smooth cedar, redwood, high-quality pressure treated pine, or comparable material and left in a natural condition to weather or be treated with a neutral or wood color stain or sealer.
- I. **Landscape Alterations: Minor, Including Tree Removals.** As allowed by the SBMC, the following landscape alterations may be approved administratively by the Community Development Director or appointed representative:
1. **Minor Landscape Alteration – General.**
 - a. The alteration satisfies all of the requirements of a “substantially similar” replacement, as defined in section 2.4.8.C of these guidelines, except the replacement may exceed the size and distance limits listed in items 2.4.8.2.b and 2.4.8.C.2.d.iii and 2.4.8.C.2.d.iv; and
 - b. Replacement does not occur within 25 feet from the top of creek bank as established on an approved plan or section drawing. If there is not a top of creek bank identified on an approved plan or section drawing, then the top of creek bank will be determined; and
 - c. A vegetation removal permit is not triggered pursuant to SBMC §22.10; and
 - d. No native landscaping is to be removed.

2. **Minor Landscape Alteration – Tree Removal.** A landscape alteration that is a tree removal or replacement may be considered a minor alteration may be approved administratively if it meets the following criteria:
 - a. The alteration satisfies all of the requirements of a “substantially similar” replacement, as defined in section 2.4.8.C of these guidelines, except the tree to be removed may exceed the size and distance limits listed in items 2.4.8.C.2.b and 2.4.8.C.2.d.iii and 2.4.8.C.2.d.iv; and
 - b. No more than two trees are proposed to be removed or replaced; and
 - c. No front setback, historic or specimen tree is proposed for removal. (Front setback, historic or specimen trees are reviewed by the Parks Department.); and
 - d. No skyline or native tree is proposed for removal; and
 - e. Replacement does not occur within 25 feet from the top of creek bank as established on an approved plan or section drawing. If there is not a top of creek bank identified on an approved plan or section drawing, then the top of creek bank will be determined; and
 - f. A vegetation removal permit is not triggered pursuant to SBMC §22.10; and
 - g. An appropriate number and size of other trees would remain on the building site after the requested removal or a sufficient number of adjacent trees on City property exist to maintain desirable tree density in the area.
- J. **Landscape Improvements.** Landscape improvements or revisions associated with projects under review are reviewed for consistency with landscape design guidelines in the HLC General Design Guidelines & Meeting Procedures: Part II, Landscape Design or other applicable design guidelines, and may be approved administratively if there is a clear consistency with the guidelines.
- K. **Lighting: Exterior.** All of the following standards must be met:
 1. Replacement or installation of additional fixtures is compatible in style, color and scale with the applicant's existing structure.
 2. Lighting fixtures and placement meet the Outdoor Lighting Ordinance and Design Guidelines.

For projects in EPV I or II, the following standards also apply:

 - a. Unshielded light bulbs are low intensity to avoid glare and should only be used for decorative or local lighting and may not be used for area lighting.
 - b. Lantern fixture designs which include bare bulbs resemble the appearance, color and low intensity of a traditional incandescent bulb.
 - c. Lighting installations may not be approved with exposed raceways or conduits.

- d. Recessed soffit lighting and landscape lighting are carefully concealed or designed in a manner appropriate to Hispanic architecture.
- L. **Mechanical Equipment: General.** Equipment such as water heaters, water heater enclosures, electrical or gas metering equipment and pool and spa equipment must be located and screened as follows in order to be eligible for Administrative approval:
 1. If the new mechanical equipment is installed at ground level, it is placed as close to the dwelling as practicable and screened from view through fencing, landscaping or other structures. Landscape screening, the preferred method of screening, is indicated on project plans to be maintained.
 2. All cables connecting outdoor equipment are properly secured and/or buried in the ground.
 3. All pool and spa equipment is located as far away from adjoining properties as reasonably practicable in consideration of neighbors, and the equipment's property line decibel level is consistent with the Noise Ordinance.
- M. **Mechanical Equipment: Rooftop.** Transmitting antennas, including wireless facilities, are not eligible for administrative approvals. Satellite antennas and other rooftop equipment reviewed by Staff must comply with the following standards:
 1. It is clearly demonstrated that the proposed equipment or skylights are not visible from adjacent properties or public ways, and are screened by existing parapets, building forms or other equipment.
 2. The screening proposal presents an integrated appearance with the overall building.
 3. Satellite dishes and associated equipment may be required to be painted the same color as the roof or adjacent background.
 4. A preferred method for screening rooftop equipment would be an appropriately designed parapet which screens mechanical equipment from street level viewers.
- N. **Roofs (and "Reroofs").** S-Tile roofs are not eligible for administrative approvals. Roofs (including new roofs and "reroofs") reviewed by Staff must comply with the following standards:
 1. The type and color of roofing material is compatible with the architectural style of the structure.
 2. Roofs of additions or accessory buildings match the roof of the structure.
- O. **Shed and Spa Enclosures.** All of the following standards must be met:
 1. The shed or enclosure area is 150 square feet or less.
 2. Accessory structures are located in consideration of neighbors and

- appropriately screened.
3. Materials match site fencing or the main structure's materials and colors.
 4. Any mechanical equipment meets the mechanical equipment administrative approval criteria in Item 1.3.2.K, above.
- P. **Sidewalk Seating for Commercial Outdoor Dining Areas.** In general accord with the guidelines appropriate for the area, the placement, style, color, and types of outdoor dining furniture and barriers shall be consistent with and complement the design and building appearance. The placement, style, colors, and types of outdoor dining furniture and barriers shall be in conformity with the Public Works Department "Standard Street Right-of-Way and Sidewalk Outdoor Dining Regulations", adopted by the HLC and the City Council. Construction features shall be approved by the City Engineer.
- Q. **Skylights.** Skylights must meet the following standards for administrative Staff approval eligibility:
1. Proposed equipment or skylights are clearly demonstrated to be invisible from the front of the building, adjacent properties, a street or other public ways, and are screened by existing parapets, building forms or other equipment.
 2. There are no more than five skylights proposed for a building.
- R. **Soil Remediation Systems: Temporary, Up to Two Years.** Systems are eligible for administrative approval if screened with 6-foot-high chain-link fencing with redwood slats, and shrubs or vines are planted or placed in pots surrounding the enclosure. The ventilation stack must be painted to match the color of the nearest background.
- S. **Time Extension.** See SBMC §22.22.180.
- T. **Tree Removals: Minor.** Removal of a tree with a main trunk less than 12" in diameter at a point 4'6" above the highest natural grade adjacent to the trunk from a site in El Pueblo Viejo is eligible for administrative approval subject to the following conditions:
1. No more than two trees are proposed for removal.
 2. No skyline, historic or specimen tree is proposed to be removed.
 3. A suitable replacement tree is proposed consistent with Part II of these guidelines.
 4. An appropriate number and size of other trees would remain on the building site after the requested removal or a sufficient number of adjacent trees on City property exist to maintain desirable tree density in the area.
 5. The removal of the tree is necessitated by plant health considerations and is following recommendations from a licensed landscape architect or certified arborist.
 6. If a tree removal does not meet the above criteria, the tree removal is subject to the review and approval of the Parks and Recreation Commission and/or the Historic Landmarks Commission.

- U. **Trellises.** Chain link, chicken wire, metal, plastic, vinyl, wire-mesh and unfaced cement block trellis materials are not eligible for Administrative Staff Review. Trellises are eligible **for administrative** approval if:
1. Trellis covers less than 100 square feet and is less than 10 feet tall.
 2. Trellis is constructed of smooth cedar, redwood, high-quality, pressure-treated pine, or comparable material and left in a natural condition to weather or be treated with a neutral or wood color stain or sealer.
 3. Lot line trellis height, length and use of materials are compatible with the surrounding area.
- V. **Walls: Freestanding Only, Not Retaining.** Walls of non-traditional material, such as unfaced concrete block, railroad ties, faux materials or plaster walls in hillside areas are not eligible for administrative approvals. Walls approved administratively must meet all the following criteria:
1. Less than 4 feet tall
 2. Less than 50 cubic yards of grading outside the main building footprint for the wall project
 3. Similar in character with other walls visible in the surrounding area from public viewing locations
 4. Hillside Design District Walls: should be designed in a way as to blend with the natural surroundings
 5. Lot Line Walls: Wall height, length and use of materials should be compatible with the surrounding area.
- W. **Windows: Minor Alterations.** Alteration projects involving the installation of vinyl windows or aluminum frame windows where no aluminum frame windows previously existed on the property are not eligible for administrative approvals. Windows may be replaced or added if the following standards are met:
1. The type of windows and color of frames are compatible with the architectural style of the existing structure.
 2. Windows of additions match the predominant windows of the existing structure.
 3. The window types are of appropriate size and scale for the proposed location(s).

1.3.3 Administrative Staff Review Standards, Project Specific Standards: Single Family Residential

- | | |
|--|--|
| A. Accessory Structures, Spas and Trash/Recycling Enclosures | L. Landscape Alterations: Minor, Including Tree Removals |
| B. Additions: Small One-Story | M. Landscape Improvements |
| C. Additions: Small Two-Story | N. Lighting: Exterior |
| D. Awnings | O. Mechanical Equipment: General |
| E. Carports | P. Mechanical Equipment: Rooftop |
| F. Chimneys and Metal Flues | Q. Porches |
| G. Decks | R. Roofs |
| H. Doors | S. Skylights |
| I. Driveways/Paving/Minor Site Work | T. Tree Removals: Minor |
| J. Fences | U. Trellises |
| K. Garages | V. Walls |
| | W. Windows |

- A. **Accessory Structures, Spas and Trash/Recycling Enclosures.** All of the following standards must be met in order to be eligible for administrative staff review and approval:
1. The accessory structure, spa, or enclosure area is 150 square feet or less. Exception: If the accessory structure, spa or trash/recycling enclosure is not publicly visible, then the project can be up to 250 square feet.
 2. Accessory structures are located in consideration of neighbors and appropriately screened.
 3. Materials match site fencing or the main structure's materials and colors.
 4. Any mechanical equipment meets the mechanical equipment administrative approval criteria listed below in Section 1.3.3.O.
- B. **Additions: Small One-Story.** Small one-story additions may be reviewed and approved administratively if all of the following apply to the project:
1. No second unit in resulting project;
 2. Additions and any alterations are less than 17 feet high;
 3. Addition is less than 50% of amount of existing square footage in 1992;
 4. Project is less than 85% of the maximum FAR;
 5. Less than 250 square feet is proposed to be added to the first floor;
 6. Addition is not highly visible to the public as defined in Section 1.3.4.B;
 7. Less than 100 cubic yards of grading is proposed;
 8. Addition complies with retaining wall guidelines; and
 9. There is no vegetative roof on the proposed resulting project.

Exception: A minor addition that is not publicly visible and is located in consideration of neighbors and appropriately screened may be approved administratively even if square footage to be added to the first floor is up to 500 square feet and if the proposed grading outside the main building footprint is up to 250 cubic yards. All other conditions above must be satisfied.

C. **Additions: Small Two-Story.** Additions may be reviewed and approved administratively if all of the following apply to the project:

1. no second unit in resulting project;
2. addition is less than 50% of amount of existing square footage in 1992;
3. the project is less than 85% of the maximum FAR;
4. less than 150 square feet is proposed to be added;
5. the addition is not highly visible to the public as defined in Section 1.3.4.B;
6. less than 100 cubic yards of grading is proposed;
7. the addition complies with retaining wall guidelines; and
8. there is no vegetative roof in the proposed resulting project.

Exception: A small two-story addition which is not publicly visible, located in consideration of neighbors, appropriately screened and which does not require a notice and public hearing is administratively approvable even if the quantity listed in criteria 6 above is exceeded (up to 250 cubic yards of grading outside the main building footprint could be administratively approvable). .

D. **Awnings.** Small canvas awnings over window or door openings are compatible with the style and the colors of the existing house. Proposals for bright colors or colors that do not match the building require review and approval by the HLC.

E. **Carports.** Carports which meet all of the following criteria are administratively approvable:

1. Are not publicly visible as defined in Section 1.3.4.
2. Carport is compatible in style and materials with the main structure.
3. Thin metal poles are not used as carport supports.
4. An appropriate decorative paved pedestrian pathway connects the carport to the main residence.
5. Landscape planting areas are located adjacent to the carport, if feasible.
6. Where there is no garage on a property, at least 200 cubic feet of aesthetically integrated lockable exterior storage is provided.

F. **Chimneys and Metal Flues.** All of the following standards must be met:

1. Chimneys are consistent with the style of the house and use masonry, stone, stucco, or metal pipe.
2. Horizontal siding material is not used on chimneys.
3. Metal flues are painted to match the roof color.
4. The shape of the chimney is fairly uniform, i.e. there is no awkward extensive projection of exposed pipe beyond the top of the chimney in response to Building and Safety requirements.

G. **Decks.** Decks over 100 square feet in area or decks elevated above the first floor level are not eligible for administrative approvals, unless the deck is not publicly visible as defined in Section 1.3.4, located in consideration of neighbors and appropriately screened. The following standards must be met for administrative approval:

1. New decks are of a scale and style which is compatible with the structure to which the deck is attached.
2. When viewed from a public viewing location, the proposed deck is not likely to be more noticeable than the structure it is attached to.
3. When viewed from a public viewing location, the proposed deck is not likely to be more noticeable than other decks on adjacent properties or in the immediate neighborhood if no decks are on immediately adjacent properties.
4. Deck wood is proposed to be left in a natural condition to weather or is proposed to be treated with a neutral or wood color stain or sealer or painted to match the color of the house or trim.

H. **Doors.** All of the following standards must be met for administrative approval:

1. The type of proposed doors and color of frames are compatible with the architectural style of the building and appear compatible with existing doors.
2. If the doors of an addition are the same size and material as existing nearby doors, the proposed doors match the existing nearby doors in appearance.
3. Door and sidelight sash material match the existing and are either wood or traditional steel iron (aluminum, anodized or other shiny or unpainted metal is not allowed in El Pueblo Viejo).
4. Where adjacent windows are "divided light" type, the new doors and sidelights shall also be divided to match the existing. Where dual glaze glass is used, the mullions should break the exterior pane.
5. In door pairs, both doors should have the same width.
6. In doors with sidelights, sidelights should have the same width if feasible.
7. Doors and sidelights shall be placed symmetrically within architectural elements if appropriate for the architectural style.

8. Door hardware must be appropriate to the architectural style of the building.
9. Any changes in paving material associated with the door alteration match the existing material.
- I. **Driveways/Paving/Minor Site Work.** Extensions, modifications, and additions to driveways may be reviewed and approved administratively if all of the following are satisfied:
 1. Grading total is less than 50 cubic yards.
 2. There is no drainage impact on adjoining lots.
 3. Any paving or driveway additions or modifications are of the same materials as the existing paving or driveway materials.
 4. Any new driveway paving materials are compatible with the house and neighborhood.
 5. New paved parking areas are screened from public viewing areas through fencing, landscaping or other structures
 6. Any construction of a driveway or sitework in close proximity to a creek or that may result in adverse drainage conditions is not eligible for administrative approvals.
- J. **Fences.** Chicken wire, sheet metal, plastic, vinyl, wire-mesh and unfaced cement block fence materials are not eligible for Administrative Staff Review. Fences not specifically excluded in the preceding sentence may be reviewed and approved administratively if all of the following are satisfied:
 1. The fence is 8 feet or less in height.
 2. Lot Line Fences: Fence height, length and use of materials shall be compatible with the neighborhood.
 3. If the fence is constructed of wood, it is constructed of smooth cedar, redwood, high-quality pressure-treated pine, or comparable material and left in a natural condition to weather or be treated with a neutral or wood color stain or sealer.
 4. If the fence is constructed of chain link, it has a dark-colored finish or is hot dip galvanized chain link fencing, and it is located outside of any front yard and screened with vines or shrubs to soften the appearance of the fence.
- K. **Garages.** Garages placed at the same distance or closer to the street than the main house are not eligible for Administrative Staff Review. Garages reviewed by Staff must be located further from the street than the main residence (i.e. “behind the house”).
- L. **Landscape Alterations: Minor, Including Tree Removals.** The following landscape alterations requiring a ministerial CDD permit, but no building permit, are considered “Minor Alterations” and may be approved administratively by the Community Development Director or appointed representative:

1. **Minor Landscape Alteration – General.**

- a. The alteration satisfies all of the requirements of a “substantially similar” replacement, as defined in section 2.4.8.C of these guidelines, except the replacement may exceed the size and distance limits listed in items 2.4.8.C.2.b and 2.4.8.C.2.d.iii and 2.4.8.C.2.d.iv; and
- b. Replacement does not occur within 25 feet from the top of creek bank as established on an approved plan or section drawing. If there is not a top of creek bank identified on an approved plan or section drawing, then the top of creek bank will be determined; and
- c. A vegetation removal permit is not triggered pursuant to SBMC §22.10; and
- d. No native landscaping is to be removed.

2. **Minor Landscape Alteration – Tree Removal.** A landscape alteration that is a tree removal or replacement may be considered a minor alteration (and therefore approved administratively) if it meets the following criteria:

- a. The alteration satisfies all of the requirements of a “substantially similar” replacement, as defined in section 2.4.8.C of these guidelines, except the tree to be removed may exceed the size and distance limits listed in items 2.4.8.C.2.b and 2.4.8.C.2.d.iii and 2.4.8.C.2.d.iv; and
- b. No more than two trees are proposed to be removed or replaced; and
- c. No front setback, historic or specimen tree is proposed for removal. (Front setback, historic or specimen tree are reviewed by the Parks Department.); and
- d. No skyline or native tree is proposed for removal; and
- e. Replacement does not occur within 25 feet from the top of creek bank as established on an approved plan or section drawing. If there is not a top of creek bank identified on an approved plan or section drawing, then the top of creek bank will be determined; and
- f. A vegetation removal permit is not triggered pursuant to SBMC §22.10; and
- g. An appropriate number and size of other trees would remain on the building site after the requested removal or a sufficient number of adjacent trees on City property exist to maintain desirable tree density in the area.

M. **Landscape Improvements.** Landscape improvements associated with projects under review shall be reviewed for consistency with landscape design guidelines in the Historic Landmarks Commission Guidelines: Part II, Landscape Design, and may be approved administratively if there is a clear consistency with the guidelines.

- N. **Lighting: Exterior.** Both of the following standards must be met for administrative approval:
1. Replacement or installation of additional fixtures are compatible in style, color and scale with the applicant's house.
 2. Lighting fixtures meet the Outdoor Lighting Ordinance and Guidelines.
- O. **Mechanical Equipment: General.** Equipment such as water heaters, water heater enclosures, electrical or gas metering equipment and pool and spa equipment must be located and screened as follows in order to be eligible for administrative approval:
1. If the new mechanical equipment is installed at ground level, it is placed as close to the dwelling as practical and screened from view through fencing, landscaping or other structures. Landscape screening, the preferred method of screening, is indicated on project plans to be maintained.
 2. All cables connecting outdoor equipment are properly secured and/or buried in the ground.
 3. All pool and spa equipment is located as far away from adjoining properties as reasonably practical in consideration of neighbors, and the equipment's property line decibel level must be consistent with the Noise Ordinance.
- P. **Mechanical Equipment: Rooftop.** Transmitting antennas are not eligible for administrative approvals. Satellite and other rooftop equipment reviewed by Staff must comply with the following standards:
1. Equipment is screened.
 2. The screening proposal presents an integrated appearance with the overall building.
 3. If equipment will be visible from off-site locations, despite screening or in cases where only vegetative screening is used, the equipment is painted the same color as the roof or adjacent background, as specified by Staff.
- Q. **Porches.** If all of the following standards are met, residential porches may be administratively approved:
1. The porch is a traditional porch design in that it is raised less than six feet above the sidewalk level or finished grade, whichever is higher, and has an understory which is completely enclosed.
 2. The type and color of proposed porch materials are compatible with the architectural style of the structure.
 3. The porch railing and supports are designed so that the front door is easily visible from the street.
 4. The porch alignment with the structure complements the existing structure's architectural alignment, patterns and features.

5. If the porch is publicly visible as defined in Section 1.3.4, the porch is modest in scale and the porch roof is not higher than 12 feet.
 6. The proposed porch roofing matches the roofing material of the structure.
- R. **Roofs.** S-Tile roofs are not eligible for administrative approvals. In order to be reviewed and approved by Staff, roofs (including new roofs and “reroofs”) must comply with the following standards:
1. The type and color of roofing material is compatible with the architectural style of the structure.
 2. Roofs of additions or accessory buildings match the roof of the structure.
- S. **Skylights.** The cumulative impacts of exposed roof equipment shall be a consideration when determining the appropriate size, quantity and type of skylights proposed. Skylights must meet the following requirements for administrative Staff approval eligibility.
1. There are no more than five skylights proposed for a building.
 2. Skylights are compatible with the architectural style of the building and with the character of the surrounding neighborhood.
 3. Skylights are located so that they are not visible from the front of the building or a street.
 4. Skylights follow one of the following standards:
 - a. Proposed skylights are flat and made of non-reflective materials; or
 - b. Will not be visible from off-site locations; or
 - c. Are screened by the building form, landscaping, or a parapet.
- T. **Tree Removals: Minor.** Removal of a tree with a main trunk less than 12” in diameter at a point 4’6” above the highest natural grade adjacent to the trunk from a site in El Pueblo Viejo is eligible for administrative approval subject to the following conditions:
1. No more than two trees are proposed for removal.
 2. No skyline or specimen tree is proposed to be removed.

A suitable replacement tree is proposed consistent with Part II of these these guidelines.
 4. The removal of the tree is necessitated by plant health considerations and is following recommendations from a licensed landscape architect or certified arborist.
 5. If a tree removal does not meet the above criteria, the tree removal is subject to the review and approval of the Parks and Recreation Commission and/or the Historic Landmarks Commission.
- U. **Trellises.** Chain link, chicken wire, metal, plastic, vinyl, wire-mesh and unfaced cement block trellis materials are not eligible for Administrative Staff Review. Trellises are eligible for administrative approval if all of the following are satisfied:
1. The trellis covers less than 250 square feet and is less than 12 feet tall

Exception: If the project is not publicly visible as defined in Section 1.3.4, located in consideration of neighbors and appropriately screened, then this criteria is not required for approval.

2. Constructed of smooth cedar, redwood, high-quality, pressure-treated pine or comparable material and left in a natural condition to weather or be treated with a neutral or wood color stain or sealer.
3. Lot line trellis height, length and use of materials are compatible with the neighborhood.

V. **Walls.** Walls approved administratively must meet all the following criteria:

1. Less than 4 feet tall. Exception: If the project is not publicly visible as defined in Section 1.3.4, located in consideration of neighbors and appropriately screened, then this criteria does not apply.
2. Less than 50 cubic yards of grading outside the main building footprint for the wall project
3. Similar in character with other walls visible in the neighborhood from public viewing locations
4. Hillside Design District Walls: shall follow all guidelines regarding blending with the natural surroundings in the "Single Family Residential Design Guidelines".
5. Lot Line Walls: Wall height, length and use of materials shall be compatible with the neighborhood.

W. **Windows.** The proposed use of vinyl windows or aluminum frame windows where no aluminum frame windows previously existed on the property is not eligible for administrative approvals. Both of the following standards must be met for Administrative Staff approval:

1. The type of windows and color of frames are compatible with the architectural style of the house.
2. Windows of additions match the predominant windows of the house.

1.3.4 Definitions

- A. **Publicly Visible.** A building, structure, or improvement is publicly visible if it may be typically, reasonably, and usually observed by an average person standing or traveling upon a public right-of-way (including streets and sidewalks) or visible from a public park, beach, or other area generally open for public use. If the building, structure, or improvement is only visible from a very distant viewing location where the building, structure, or improvement would not be readily discernable from the viewing location, then the building, structure, or improvement is not considered publicly visible for purposes of interpreting these guidelines.

- B. **Highly Visible to the Public.** A building, structure, or improvement is highly visible to the public if it appears prominently and is easily observed by an average person standing or traveling upon a public right-of-way (including streets and sidewalks) or prominent and easily visible from a public park, beach, or other area generally open for public use. A building, structure or improvement highly visible to the public usually fronts public streets or other public areas.

SECTION 4. Cost Consideration for Affordable Multi-Family Housing Projects

The Historic Landmarks Commission shall take the total cost of the applicant's design into consideration when reviewing affordable housing projects where all units qualify as affordable housing in compliance with the city's affordable housing program policies and procedures. The expected cost of certain preferred design elements can be used as a consideration by the HLC to maintain the affordability of residential units.

SECTION 5. Zoning Modification Comments

1.5.1 Historic Landmarks Commission Role in Commenting on Modification Requests

Requests for modifications to the Zoning Ordinance for individual projects may be approved by either the Staff Hearing Officer (SHO) or the Planning Commission (PC) in accordance with SBMC §28.92.110. HLC comment occurs at Concept Review hearings prior to the request being heard by the SHO or PC. The HLC's role in commenting on the modification is limited to whether the proposed modification supports preservation of a building's historic character, supports protection of a historic resource, poses aesthetic issues such as inconsistency with neighborhood development patterns or exacerbates conflicts with applicable design guidelines. General support or lack of support of a modification is a land use decision and is not the purview of the HLC. Following is an example of appropriate HLC comment on modification requests:

"The proposed modification is/is not aesthetically appropriate. The proposed modification poses/does not pose consistency issues with applicable guidelines. *(include applicable guideline title and as needed - specific guideline topics for reference).*"

- 1.5.2 **Zoning Modifications of Yard, Lot and Floor Area Regulations.** For modifications of yard, lot, or floor area regulations, comment to the SHO or PC on whether the modification promotes an appearance of uniformity of development is helpful because the promotion of uniformity of improvement is one of the available grounds for the approval of a modification of yard, lot and floor area regulations.

SECTION 6. Single-Family Residential Two Uncovered Parking Space Exception Requests

- 1.6.1 **Requirements.** For an exception of two uncovered parking spaces, the Zoning Ordinance requires:

1. The uncovered spaces shall not be located in any front yard on the lot,
2. The uncovered spaces shall be screened from public view,

3. If new pavement is proposed for any of the uncovered spaces and the site has an appropriate slope for permeable paving, then the new pavement shall be permeable,
4. Storage space with exterior access of at least 120 square feet of net floor area shall be provided on the lot,
5. The location of the parking and the design of the screening shall be reviewed and approved by the HLCHLC, as applicable,
6. If the lot is located in the A, E, or R-1 zones and has less than 15,000 square feet of net lot area, the uncovered spaces may encroach up to three feet (3') into a required interior yard if a landscaped buffer is provided between the uncovered spaces and the adjacent interior lot line.
7. The HLC is to review the effectiveness of the project's proposed screening of the uncovered spaces from public view and the aesthetic quality of structures and landscaping related to automobile and bicycle parking and storage structures. The HLC also determines whether the project is consistent with Neighborhood Preservation Ordinance findings, including neighborhood compatibility findings.

1.6.2 **Recommended Project Aspects.** Inclusion of the following items in an uncovered parking modification proposal will make the project more likely to be able to be supported. The HLC reviews the aesthetic qualities of uncovered parking areas, permeable paving, landscaping plantings and hardscapes, storage structures or exterior cabinets, bicycle racks and shelters, or any other project aspects that arise from the two uncovered parking spaces exception proposal.

Recommended Items

- A. **Screened from neighbor views.** In addition to screening from public views as required by the Zoning Ordinance, the uncovered space(s) is effectively screened from neighbor views, and so noted by the HLC in their comments on the project. Any gates proposed for screening may be required to be electronic, to ensure that they can be easily closed after each use;
- B. **Any converted garages to be appropriately designed.** For projects that include conversion of a garage to another use, garage door(s) are removed and driveway paving to the converted garage are replaced with appropriate landscaping;
- C. **Parking delineated.** The uncovered space is clearly delineated for parking use through the use of appropriate planting and hardscape landscape details. Landscape features prevent parking beyond the delineated parking spaces into other planted areas;
- D. **Appropriate shading.** Landscape planting ensures appropriate shading of the space to avoid the possibility of a future plastic/canvas shade structure. New shade trees should have leaf litter, pollen, or branching characteristics compatible with car parking, such as trees listed in Part II of these guidelines as appropriate for parking lots;

- E. **Appropriately designed storage.** At least 120 square feet of exterior accessible lockable storage suitable for the storage of yard maintenance equipment and hazardous household products is provided. Storage area and design should be adequate to the degree necessary to discourage future placement of lower aesthetic quality sheds;
- F. **Formal bicycle parking.** A formal bicycle parking area supports a modification because garages are typically where bicycles are securely stored. Formal bicycle racks with paved maneuvering room consistent with City Transportation standards would support an uncovered parking modification request as it would ensure bicycle parking is adequately addressed. Sheltered bicycle parking would further support the proposal;
- G. **High quality details proposed.** High quality design details and materials are provided in all of the project aspects that support the uncovered parking space, e.g. landscaping and hardscape parking area delineations, screening and shading, storage cabinet and bicycle parking provisions, and the provision of high quality design details as noted by the HLC in their comments.

Additional Supporting Circumstances

The HLC may also make note of any of the following additional supporting circumstances in their review of two uncovered parking space exception requests.

- A. **Constrained lot.** The design is needed for site development flexibility on a constrained lot, such as a lot that is less than 55' wide or less than 10,000 square feet; or
- B. **Facilitates effective response to legally non-conforming parking situation.** The proposal allows the applicant to avoid demolition of major portions of existing structures to accommodate an addition that triggers a two-car parking requirement where there was previously only a legal non-conforming one-car garage on site; or
- C. **Street-friendly façade.** The proposal results in an exceptionally "street-friendly" façade. Windows, and in some cases, a covered front porch, support neighborhood safety. Rather than an unfriendly, bulky, or windowless garage, an appropriately-scaled and detailed façade is featured.
- D. **Open site design.** The proposal allows for a more "open" site design allowing more opportunities for sunlight, air circulation or landscaping.

PART II

LANDSCAPE DESIGN GUIDELINES

INTRODUCTION

Purpose of the Landscape Design Guidelines. To provide general and specific guidelines for landscape plan design and installation. Landscaping should be used as a unifying element within a project to enhance a building site and help achieve project compatibility with existing surroundings while complying with applicable policies and regulations.

Relationship to the Santa Barbara General Plan and Coastal Plan. The Santa Barbara General Plan contains policies and direction regarding landscaping in the Land Use, Conservation, Environmental Resources, and Seismic Safety Elements. City scenic routes, tree preservation, creek protection and other topics are covered in the elements. The Coastal Plan also contains landscaping direction, especially with regard to bluff-top development, views from Highway 101, and tree preservation and protection. The Zoning Ordinance and these HLC General Design Guidelines & Meeting Procedures are intended to implement the General Plan and Coastal Plan policies.

Relationship to the Santa Barbara Zoning Ordinance. The Santa Barbara Municipal Code contains specific standards that must be met in landscape plans, including:

- parking lot standards (§28.90)
- planting material standards (§28.87.200)
- water conservation (§22.80)

These HLC Guidelines and Meeting Procedures are intended to augment the Municipal Code by providing additional guidelines and details to complement topics in the Code, as well as to provide guidelines on additional topics. In the case of a conflict between the Municipal Code and these HLC General Design Guidelines and Meeting Procedures, the Code requirements prevail over these HLC General Design Guidelines and Meeting Procedures.

Basis for HLC Landscape Design Guidelines. Many projects subject to HLC review are required to have landscape plans. Projects in some areas, such as El Pueblo Viejo, are subject to other design guidelines which include direction regarding landscaping (see discussion in Part I of these HLC General Design Guidelines & Meeting Procedures). However, some HLC projects are not in an area with other design guidelines. These HLC Landscape Design Guidelines clarify and expand on HLC criteria for reviewing required landscape plans throughout the City.

Relationship to City Water Conservation Programs. The City provides full-color handouts which provide specific techniques on how to comply with the Landscape Design Standards for Water Conservation (Appendix A) and other sustainable landscaping techniques. Full-color handouts regarding sustainable and water-wise landscaping are available in the 630 Garden Street lobby area and on-line at:

www.santabarbaraca.gov/Government/Departments/PW/WCBrochuresAndMore.htm

- **Lawn Alternatives**, City of Santa Barbara Water Conservation Program
- **Sustainable Landscaping**: Resource Efficient Landscapes for Santa Barbara County, Santa Barbara County Water Agency and City of Santa Barbara Public Works Department
- **How to Be Water-Wise in Your Garden**, Family of Santa Barbara Water Providers
- **How to Water Your Garden**, Sunset, 2000
- **Water-Wise Gardening for California: Advice and Design Ideas for the 21st Century**, the Editors of Sunset

Also see www.sbwater.org for additional water-saving information.

Relationship to City Creeks Programs. These guidelines support the goals of the City's Storm Water Management Program (SWMP) as well as general creeks conservation goals. Some projects are required by the SWMP to implement storm water best management practices to retain water on site, or to treat water on site. For more information regarding the SWMP and other creek programs, see: www.SBCreeks.org

Guideline Organization. The HLC Landscape Design Guidelines are broken into four sections. The first section describes when Landscape Plans are required and licensing requirements. The second section consists of general landscape design guidelines applicable to all projects. Vegetation removal guidelines and their relationship with NPO vegetation removal findings are described in the third section. The last section covers special constraint area guideline topics.

SECTION 1 Landscape and Irrigation Plan Applicability, Licensing and Submittal Requirements

2.1.1 Landscape Plans

A. Applicability

1. **Commercial, Industrial, Institutional, or Multi-Family Structure.** All new development projects which propose new structures require landscape plans. Complete demolition of an existing structure which involves construction of a new structure requires a landscape plan for the altered site.
2. **Major Addition or Alteration Projects.** Projects involving substantial additions or alterations to existing developed sites may require landscape plans when:
 - a. Existing landscaped areas are proposed for removal or alteration and/or
 - b. New landscaping improvements are proposed.

3. **Projects with Grading Work or Vegetation Removal.** Projects which propose substantial landscaping changes as a result of grading work or vegetation removal may require landscape plans or additional landscaping information, at the HLC's discretion.
 4. **Projects Which Involve Historic, Archaeological, or Environmental Resource or Hazards and Projects with Potential Public View Impacts.** Landscape improvements and a landscape plan may be required to address aesthetic concerns in the following cases:
 - a. When a proposed improvement involves a historic, archaeological, or environmental resource or hazard, and/or
 - b. To lessen potential project impacts to public scenic views.
 5. **Planning Commission Projects.** A Landscape Plan is required for projects subject to Planning Commission review, unless waived.
 6. **New Single-Family Residential Unit.** A landscape plan is required for all new single-family residential units.
 7. **Single-Family Residential Property Projects with Terracing Components.** Landscape plans are required where terracing projects occur in the hillside area. The plans are required to ensure fire hazard landscaping issues are addressed and to stabilize and beautify graded areas.
- B. **Proposed Landscaping Shown on Site Plans.** Minor projects, small parking area landscaping or landscaping that is not visible to the public may be exempt from providing a formal separate landscape plan as determined by the HLC. In these instances, proposed landscaping may be shown on the site plan rather than on a separate landscape plan.
- C. **Plan Contents.** Landscape plans must be submitted prior to the HLC project design approval hearing. See the Planning and Zoning Counter handout "Landscape Plan Requirements" for required landscape plan contents.

2.1.2 Plan Preparation Licensing Requirement

- A. **General Licensing Requirement.** Pursuant to Business and Professions Code §5641, the preparation of landscape and/or irrigation plans for all commercial, industrial, institutional and multi-family projects must be executed and stamped by a licensed landscape architect or by one of the following licensed or registered professionals:
- architect
 - engineer
 - land surveyor
 - landscape contractor who is contracted to install the landscaping

Property owners may also prepare their own landscape plans. Additionally, property owners or irrigation consultants may prepare irrigation plans per Business and Professions Code §5641.6. However, the HLC may recommend that a property owner hire a licensed landscape architect or engineer to prepare landscape or irrigation plans for projects in the following circumstances:

1. Any landscape or irrigation plan submittal is determined inadequate or otherwise does not meet minimum review standards.
2. The proposed project involves extensive grading, revegetation or improvements with unique or sensitive habitats or environments.
3. The project requires a drainage plan. For example, drainage plans are sometimes required for Storm Water Management Plan compliance.

B. Single Family Residence Licensing Requirement

1. **No License Required.** In general, in the following circumstances, landscape and/or irrigation plans may be prepared by an unlicensed person.
 - a. **Concept Review Plans.** Per Business and Professions Code §5641, no license is required to prepare landscape plans for projects for conceptual design and placement of tangible objects and landscape features or plans, drawings and specifications for the selection, placement or use of plants for a single family dwelling.
 - b. **Final Plans - General.** Per Business and Professions Code §5641, plans presented for final approval which do not require grading or drainage plans may be prepared by unlicensed persons.
 - c. **Plans for Own Property.** Per Business and Professions Code §5641, any person may prepare conceptual or final plans for any landscape project on a property they own.
 - d. **Irrigation Plans.** Property owners or irrigation consultants may prepare irrigation plans per State Business and Professions Code §5641.6.
 - e. **Advisories.** The HLC may recommend, but may not require, that an applicant hire a licensed landscape architect to prepare plans for projects in the following circumstances:
 - i. The plan submittals are determined inadequate or otherwise do not meet minimum review standards; or
 - ii. The proposed project involves extensive revegetation or improvements with unique or sensitive habitats or environments.

2. **License Required: Final Grading and Drainage Plans.** Per Business and Professions Code §5641, only a licensed landscape architect, registered or licensed engineer, architect, land surveyor; or landscape contractor who is contracted to install the landscaping may prepare construction documents, details or specifications for the tangible objects or landscape features, and alteration of site requiring grading and drainage plans. Property owners preparing plans for their own property are exempted from the licensing requirement by Business and Professions Code §5641.1.

SECTION 2 General Guidelines

Landscaping is considered an integral part of a project's design. Landscaping can enhance the City's natural beauty and complement new development as well as provide neighborhood cohesiveness. Landscaping embellishes and enhances new construction. Landscape plans should reflect consideration of overall site aesthetics. However, avoid using landscaping to correct problems of design, privacy or bulk. The architecture of a building should be of sufficient aesthetic quality to stand alone, regardless of potential landscape changes over time. Landscaping improvements should:

- complement architecture;
- provide outdoor privacy areas;
- provide screening for undesirable views;
- provide usable and functional open space; and
- use appropriate water-wise plants, limited turf, and efficient irrigation design principles.

The following general guidelines apply to all types of landscaping proposals:

2.2.1 **Site Layout and Massing.** Landscape massing refers to plant material that creates an appearance of substantial vegetation. The landscape plan should balance plant material and hardscape site elements such as walkways and walls.

- A. **Lot Landscape Coverage.** Landscape massing shall provide for a generous overall percentage of plant landscaping in relation to the site and lot hardscape. Paved areas should be minimized and planting areas maximized.
- B. **Unit Screening.** Where appropriate, consider screening plants, such as hedges, to create privacy between units. Special care should be taken to ensure that mature hedge heights and sizes will fit the space and ensure that only a minimal amount of pruning will be necessary for maintenance. Hedges shall comply with SBMC §28.87.170.
- C. **Compatibility.** Landscaping visible from the street should be compatible with the surrounding neighborhood in plant type and scale. Site elements such as walls, steps, fences, etc. should be compatible with neighborhood elements in scale, color and materials.
- D. **Trees for Shade and Weather Protection.** Canopy, skyline, and specimen trees shall be provided for shade and weather protection.

2.2.2 Plant Selection. Plant selection for the landscape plan should consider principles of sustainable landscaping and be sensitive to the elements described below.

- A. **Blending with Existing Vegetation.** Blend the type, coloring, size, and height of proposed vegetation into existing vegetation.
- B. **Growth.** Consider appropriate plant selection and location to:
 - 1. Reduce the potential for normal plant material growth to significantly block an adjacent property's primary scenic view or sunlight (solar access), and/or;
 - 2. Achieve privacy screening and produce a desired aesthetic result. Select plants that can grow to the necessary screening height without having to be pruned;
 - 3. Ensure vegetation scale consistent with public view preservation called for in the Coastal Plan and General Plan (e.g., Land Use Element City Scenic Routes).
- C. **Adaptability.** Emphasis shall be placed on the concept of "Right Plant/Right Place." Select plants that are naturally adapted to the growing conditions of the site such as soil type, slope, climate tolerance, space limitations, etc.
- D. **Native and Mediterranean Plants.** Use native plants whenever possible. Where non-native species are used, emphasize plants from other Mediterranean climate regions.
- E. **Fire Retardant Landscaping.** Use fire retardant landscaping where possible. See Section 2.4.3 High Fire Hazard Area Landscape Design and Appendix B for information about High Fire Hazard Area landscaping requirements. A list of plants which are highly flammable and should not be planted in the High Fire Hazard Area is included in Appendix B.
- F. **Invasive Plants.** Avoid invasive plant use, especially in, or adjacent to, environmentally sensitive habitat areas. Carefully select plants to avoid species that might migrate from the landscape and become "weeds." (Refer to Appendix C List of Invasive Plants, derived from a list published by the California Exotic Pest Plant Council.)
- G. **Plant Spacing and Height.** Space plants according to their mature size, allowing for plant maturation without crowding or root damage. Consider mature plant height to avoid unnecessary pruning and hedging, especially under windows and eaves of structures and along property lines.
- H. **Group by Plant Needs.** Plants with similar cultivation, watering and sun/shade requirements should be grouped together into hydrozones and designated to separate appropriate valve types, per SBMC §22.080.020.
- I. **Limit Turf.** Use turf only in areas where appropriate for recreational uses. Adhere to turf reduction percentage requirements in SBMC §22.080.020. Consider lawn alternative species.

- J. **Natural Plants.** Plant landscaping should consist of real plants. Artificial plastic plants or the use of synthetic turf is not allowed in parkways or publicly visible locations. The use of synthetic turf may be approved at other less visible areas but is generally discouraged.

2.2.3 Sustainability Principles. Guidelines throughout this document support sustainable principles. Landscape and irrigation system design should reflect consideration of sustainable landscaping principles and be sensitive to elements described below. Also, see the additional sustainability concepts in Special Area Guidelines in this Part 2 Section 4.

- A. **Preserve Existing Vegetation.** Preserve existing vegetation and significant trees as much as possible (see Part 2 Section 3, Tree and Vegetation Preservation).
- B. **Natural Features and Graded Areas.** Avoid unnecessary grading and removal of soil. Protect existing natural features and re-vegetate graded areas as soon as possible.
- C. **Climate Buffering.** Use landscaping to control sun and wind. For example, the use of deciduous trees and/or vines on the south sides of buildings can provide passive heat in the winter and cooling in the summer.
- D. **Erosion-Prone Areas.** Consistent with the Seismic Safety Element, species that add weight to a hillside (such as ice plant) shall be avoided on steep hillsides or adjacent to bluff top areas susceptible to erosion. Deep-rooted species that assist in stabilizing slopes and control erosion are encouraged.
- E. **Water Efficiency.** Water-efficient landscaping is mandatory per SBMC §22.80.020. Landscaping and irrigation shall be planned with consideration for water conservation through use of water-wise plant species, water-efficient irrigation systems and other methods listed in SBMC §22.80.020, including using drip irrigation and mulching and designing irrigation to minimize runoff .
- F. **Reducing Runoff.** Plant species that require significant watering (such as turf) shall be avoided on steep hillsides or narrow pathways, planters and parkways. Such areas are difficult to irrigate without significant runoff. Note the requirements in SBMC §22.80.020
- G. **Irrigation.** Use water-efficient irrigation systems, including drip irrigation, micro sprayers, bubbler and rotating spray nozzles. Use smart irrigation controllers and rain sensors. Note the requirements in SBMC §22.80.020
- H. **Waste Minimization.** Sustainable landscape planning that protects the environment by using minimal resources and creating minimal waste is encouraged.

- I. **Stormwater Management.** Santa Barbara neighborhoods most commonly drain to local creeks, which then flow to the ocean. Non-point source pollution such as pesticides and fertilizers from lawns, heavy metals from driveways and pet waste pose a significant threat to the quality of life on our beaches and streams. Stormwater should be viewed as a resource with environmental and educational significance that can give unique character to neighborhood landscapes. Bioswales, infiltration areas, vegetated filter strips, porous paving, rainwater cisterns, and rainwater gardens should be incorporated into site design to allow biofiltration of sediment and pollutants, to slow down potentially damaging flows, and to increase the presence of nature within the community. These measures are very attractive, low tech, low cost, low maintenance and provide significant benefits to our environment. Appropriate choice of plantings and irrigation for the site helps reduce urban runoff and the subsequent non-point source pollution.
- J. **On-Site Water Retention and Natural Drainage.** Use methods to retain water on the site to recharge groundwater and to use for future watering (e.g., cisterns). Design landscaping to enhance natural drainage and biofiltration of pollutants through the use of bioswales, detention basins and other techniques.
- K. **Permeability and Percolation.** Use urban runoff/pollution control Best Management Practices to maximize the permeability of sites and on-site percolation of runoff. For example, design projects to minimize paved areas, collect runoff on-site, or maximize hardscape area permeability with brick or pavers on sand.
- L. **Drainage Flow.** Use natural watercourses, earth swales, v-ditches, drywells and water dissipation devices to enhance drainage flow on and through the site.

2.2.4 **Street and Driveway Design.** Street and driveway designs should utilize the following design concepts.

- A. **Grading, Exposed Excavations and Retaining Walls.** Design streets or driveways to limit grading quantities and steep, exposed excavations and avoid the use of retaining walls where possible.
- B. **Street and Driveway Widths.** Limit street and driveway widths to reduce paving quantity and encourage slower vehicle speeds, while providing adequate access. Consider the use of ribbon driveways, pavers and other materials that decrease the amount of pavement and increase permeability. Please note, applicants must consult with the Fire Department and Transportation Division regarding alternative paving methods.
- C. **Garage Orientation.** Where possible, orient driveways and garages to be street-friendly, so that garage or carport openings are not facing directly onto streets.
- D. **Sidewalk Widths.** Provide street sidewalk widths that allow for landscaped parkways to buffer pedestrians from street traffic where feasible.

- E. **Street Trees.** City street trees should be incorporated into a project when none exist and/or at locations recommended by the HLC or City Arborist and the Street Tree Master Plan. Any street tree removal is subject to Park Commission approval.
- F. **Street Tile.** Refer to the City of Santa Barbara Paver Surfaces and Transitions Guidelines. The guidelines have been developed by the City under the auspices of the Access Advisory Committee to Staff, the Architectural Board of Review, and the HLC. The guidelines are intended to facilitate the Design Review process, in consideration of City discretionary standards and in conjunction with the California Title 24 Accessibility requirements.
- G. **Plants and Irrigation in Parkways.** Water-wise plants are required and turf is prohibited in parkways. Drip irrigation or low precipitation rate sprinklers/bubblers are encouraged and irrigation must be designed to minimize runoff. See the City's list of recommended plants for parkways.

2.2.5 Parking Lots. Parking lot designs for commercial, industrial, institutional, or multi-family residential developments are required to provide attractive and durable screening for adjoining areas (SBMC §28.90.050). Canopy trees provide important benefits in parking lots, such as producing shade, moderating the heat absorbed by asphalt, and reducing air pollution from parked cars. The HLC is charged with enhancing parking lot designs to offset utilitarian appearances. The following standards apply to all parking areas, parking lots, and automobile service station/mini-market designs. Please note paving standards are also included in Sections 1.3.1 and 1.3.2.C.

- A. **Perimeter Planter Requirements.** SBMC §28.90.050.3 contains perimeter planter requirements. The Code also provides the HLC with the ability to reduce or waive the requirements where alternative landscaping and designs proposed are equally effective in meeting the ordinance intent. In accordance with the ordinance, the HLC will consider whether a landscape planter waiver can be granted in the following circumstances:
 - 1. Unique lot or existing building configurations will not allow a full parking area with five (5) foot wide planters; or,
 - 2. Where an existing building precludes a driveway with full-sized planters; or
 - 3. The project entrance is enhanced with an effective landscape screen, screen walls, decorative paving, significant architectural elements and/or skyline trees; or
 - 4. Significant landscaping is proposed on other portions of the site so the plan maximizes landscaping within the parking area and/or throughout the project.
- B. **Plant Types.** Planting shall consist of trees, shrubs and ground cover. Water-wise plant use is required, as is flowering vine use on fences and walls. No turf is allowed.

- C. **Shade and Greenery.** Use canopy trees in the interior of surface parking lots to provide shade and greenery. SBMC §28.90.050.3 requires a ratio of trees to parking spaces. Beyond this requirement, providing tree canopy coverage to result in at least 50% of the total paved area to be shaded within fifteen (15) years is recommended. (Refer to List of Recommended Parking Lot Canopy Trees-Appendix D).
- D. **Vertical Clearance.** Mature tree canopies should have a vertical clearance of fifteen (15) feet in order to accommodate lighting fixtures. Lighting fixtures should be lower than mature canopy trees. (Comply with Outdoor Lighting Design Guidelines).
- E. **Pavement Minimization.** Consider variable materials to reduce the appearance of substantial paving and to increase permeability. Please note, applicants must consult with the Fire Department and Transportation Division regarding alternative paving methods.
- F. **Irrigation.** Drip irrigation or low precipitation rate sprinklers/bubblers are encouraged and irrigation must be designed to minimize runoff.

2.2.6 **Tree Root Barrier Guideline.** The HLC may suggest or condition that an applicant study or confer with a tree expert (landscape architect, the City arborist or certified arborist) to offer recommendations as to whether a root barrier should be required to be installed. Root barriers may be suggested for a proposed tree location where the roots are within four feet of any hardscape, on-site or off-site, and may potentially affect buildings, sidewalks, paved pathways, curbs, etc. Palm trees do not need root barriers. Barrier placement is not recommended for a tree installation when existing trees are in close proximity because installation may damage roots of those trees.

SECTION 3 Additional Guidelines for Commercial/Industrial, Multi-Family and Residential Projects

The following guidelines are applied to Commercial/Industrial and Multi-Family Residential projects as specified below in addition to the Part I General Guidelines Section 2 of this document.

- 2.3.1 **Commercial/Industrial/Institutional.** Landscape planning in commercial and industrial areas of the City should have a different emphasis than residential areas. The focus in commercial/industrial areas should be on streetscape, driveway areas and parking lots. Mixed-use developments should consider goals from both commercial and residential landscape design guidelines. Large pavement areas, such as driveways and parking areas, should be embellished through material variation and/or pedestrian walkway delineation.
- 2.3.2 **Multi-Family Residential.** Exceptional landscape plans for multi-family residential developments are important due to the dense nature of these projects. The following guidelines are specific to proposed multi-family residential landscape plans.
 - A. **Outdoor Living Space Area.** Designs should attempt to maximize the open yard area for each new dwelling unit, providing real usable outdoor living space,

with special emphasis on safe, usable play areas for children. Consideration will be given for small or alternative landscaping designs for highly urban areas.

- B. **Outdoor Living Space Design.** Outdoor living area designs should have functional areas relating to site, solar access, and floor plans.
- C. **Pavement.** Vary paving materials to create interest and to delineate circulation within the ground plane, including separation between pedestrian and vehicular access.
- D. **Habitat Enhancement.** Use habitat-enhancing trees and shrubs.
- E. **Plants for Building Edges.** Use vines and espaliered plants to soften building edges.
- F. **Screening.** Design the site to screen unsightly elements (e.g., carports, parking stalls, trash areas).
- G. **Maintenance.** Projects must be maintainable and sustainable.
- H. **Minimize Green Waste.** Select plant species whose mature size is appropriate for the area planted to minimize pruning. Prune for health, not for size reduction or invasion control.
- I. **Landscape Protection.** Protect landscaped areas from vehicular and pedestrian encroachment with raised planting surfaces or curbs. Concrete step areas or stepping-stones should be provided in landscape planters adjacent to parking spaces.

2.3.3 Two-Family (R-2) Zone

Two-family (R-2) Zone projects are subject to the following guidelines. These projects should also be designed with special consideration for consistency with Street and Driveway Guideline 2.4.B, above.

- A. **Street Presence.** Street presence is an important consideration. When required private outdoor living space is provided in the front yard, avoid high hedges and/or solid walls.
- B. **Open Yard Area Landscaping.** The required 600 square foot open yard area should include landscaping (e.g. trees and plant materials).
- C. **Pavement Minimization.** Consider the great value in minimizing pavement to the fullest extent possible and including pervious surfaces.

SECTION 4 Tree and Vegetation Preservation

- 2.4.1 **General.** Development should be sensitive to existing mature trees as they are a valued community resource. One of the Conservation Element's goals is to prevent unnecessary tree removal. Mature trees should be integrated into project design rather than removed. All feasible options should be exhausted prior to tree removal. Preservation and protection of existing significant trees is a primary goal of a landscape design and a site design.
- 2.4.2 **Projects Proposing Tree Removal.** If existing tree preservation is not possible, tree loss may result in required tree replacement(s) or possible project denial.

- A. **Considerations When Acting Upon Tree Removal Requests.** The HLC considers the following in acting upon a tree removal request:
1. Whether such tree is designated as an historic or specimen tree;
 2. The potential size of the tree in relation to the size of the lot or building site and the size of the proposed or existing improvements;
 3. The number and size of other trees which would remain upon the building site after the requested removal;
 4. The number and location of adjacent trees on City property and the possibility of maintaining desirable tree density in the area through additional planting on City property;
 5. Any beneficial effects upon adjacent trees to be expected from the proposed removal;
 6. Whether the tree sought to be removed was planted by or with the permission of the applicant or the applicant's co-tenant at the time such tree was planted.
 7. The condition and structure of the tree and the potential for proper tree growth and development of the tree canopy.
- B. **General Tree Replacement Standards.** Trees four (4) inches in diameter or greater at four feet six inches (4'6") above grade in height removed shall be replaced on site on a minimum one-to-one basis, unless an alternative replacement ratio is deemed necessary as part of the environmental review process. The standard required mitigation for tree loss is a 3:1 ratio replacement. This standard can also be increased up to 10:1 depending on the type of tree removed, lot size, and size and expected survival rate of replacement trees.
- The appropriate replacement size shall be determined through the environmental review process in conjunction with HLC review depending on the size and biological value of the tree and on-site conditions. (See Tree Protection and Replacement Standards, below).
- C. **Tree Protection and Replacement Standards.** Consistent with Environmental Resources Element Biological Resources policies ER11 and ER12, 1979 Conservation Element Visual Resources Policies 1.0, 2.0 and 4.0 and 1979 Conservation Element Biological Resource policies 4.0 and 5.0; efforts shall be made to preserve trees, in particular, native trees, including oak trees, and specimen trees are subject to the following guidelines:
- D. **Earth Disturbance Prohibitions.** No earth disturbance is allowed in the circular area one-third the distance of the overall canopy/dripline as measured from the trunk. (For example, if the tree canopy is 30 feet, no work can be done in the first 10 feet from the outside edge of the trunk in all directions.) In other areas under the canopy/dripline, earth may only be disturbed with hand tools.
1. **Arborist's Report.** Any work within the general vicinity of the dripline of a tree may require an Arborist's Report. If an Arborist's Report is required, the HLC may defer to the report's recommendations.

2. **Paving.** Paving and other non-permeable surface encroachment under native and specimen tree canopy/driplines should be minimized. For oak trees, no paving is allowed under the canopy due to their sensitivity to paving. If paving or other non-permeable surfaces encroach within a canopy, no more than 25% of the total area beneath the canopy/dripline can be covered and paving may only be placed by hand or with hand tools.
3. **Distance from Structures.** The edge of the mature native or specimen tree canopy/dripline should remain a minimum of five (5) feet from all new structures.
4. **Protection Notes.** Proposed projects which may impact existing native or specimen trees are required to submit Tree Protection notes as part of the final landscape submittal. Notes shall be located on all site and/or grading plans.
5. **Replacement Dimensions.** If it is determined that a native or specimen tree is to be removed, the diameter of the required replacement tree(s) will be equal to or greater than one-quarter the diameter of the existing tree (e.g., a 12-inch-diameter oak will be replaced with one measuring no less than 3 inches). Smaller tree replacement sizes than this formula may be specified in some cases to ensure replacement tree availability.

2.4.3 Tree Removal and Replacement Permits: Lots Developed with Multi-Family Residential, Commercial, or Industrial Uses.

- A. **General** (per SBMC Chapters §15.24 and §22.22). A permit is required for the alteration, removal or replacement of a tree as follows:
 1. **A Parks and Recreation Commission Tree Permit (P & R permit)** is required to significantly alter, remove or replace:
 - a. Designated historic or specimen trees (as defined in SBMC §15.24.010).
 - b. Parkway Trees (as defined in SBMC §15.20.020).
 2. **HLC Review and a Community Development Department permit (CDD permit)** is required to:
 - a. Remove a front setback tree (as defined in SBMC §15.24.010).
 - b. Remove a parking lot tree (as defined in SBMC §15.24.010).
 - c. Remove a tree that is part of approved landscaping on record.
 - d. Cut or remove a tree in a way that is an exterior change or modification affecting the exterior visual qualities of a property (see SBMC §22.22).

2.4.4 Tree Removal and Replacement Permits: Lots Developed with Single Family Residential or Duplex Uses.

- A. **A Parks and Recreation Commission Tree Permit (P & R permit)** is required to significantly alter, remove or replace the following trees:

1. Designated historic or specimen trees (as defined in SBMC §15.24.010).
2. Parkway Trees (as defined in SBMC §15.20.020).

B. HLC Review and a Community Development Department permit (CDD permit) is required to:

1. Remove a front setback tree (as defined in SBMC §15.24.010).
2. Remove a tree on a lot where a zoning regulation (such as §28.90.001.I or §28.90.100.G) or a specific condition of approval for the development on the lot specifically require(s) the installation and maintenance of specific trees or plantings.
3. Cut or remove a tree in a way that is an exterior change or modification affecting the exterior visual qualities of a property (see SBMC §22.22).

Exception: Substantially Similar Replacement Permit. A permit is not required for the removal of trees normally subject to HLC review if the tree is replaced with a tree that is substantially similar as defined in 2.4.8.C of these guidelines.

2.4.5 Tree Removal Permits Exception: Dead, diseased or hazardous trees, except parkway trees, may be removed without a P & R permit or CDD permit (see SBMC Chapter §15.24 for specific requirements). However, where the removal of a tree will significantly affect the exterior visual qualities of a lot, the Parks and Recreation Director or the Community Development Director may require a subsequent tree replacement approved by the HLC with a CDD permit within 30 days. If the tree replacement is substantially similar to the tree to be replaced, as defined in 2.4.8.C, then HLC review is not required for the replacement tree. If the tree is not substantially similar to the tree to be replaced, then a permit and review for the replacement tree is required.

2.4.6 Landscape Removal and Replacement Permits. HLC review and a CDD permit is required for the following landscape changes:

1. Alteration of a natural feature that results in an exterior change that affects the exterior visual qualities of the property in a publicly visible location. Note: If a tree removal is involved, see Section 2.4.3 and 2.4.4, above.
2. An alteration to approved landscaping subject to protection pursuant to the Municipal Code (see definition in section 2.5.A of these HLC Guidelines). Note: If a tree removal is involved, see Section 2.4.3 and 2.4.4, above.

Exception: Substantially Similar Replacements. A permit is not required for the replacement of approved landscaping or other improvements as long as the approved landscaping (as defined in these guidelines in section 2.4.8.A) or other improvements are replaced with landscaping or other improvements that are “substantially similar” (as defined in Section 2.4.8.C of these guidelines).

2.4.7 Hillside Design District Vegetation Removal: Vegetation Removal Ordinance and Neighborhood Preservation Ordinance (NPO). There are specific vegetation removal types and quantities that may require a vegetation removal permit and HLC review in the Hillside Design District. For example, a vegetation removal permit may be

required for some forms of weed abatement. Refer to SBMC Chapter §22.10 for exemption categories.

NPO findings are made for appropriate grading and for native tree protection on steep slopes in the Hillside Design District. The HLC strongly encourages native vegetation preservation. HLC NPO findings must be made for a project design approval.

2.4.8 Definitions

- A. **Approved Landscaping:** Landscaping on lots developed with multi-family residential, commercial or industrial uses shown on approved plans on record with the City of Santa Barbara. Approved landscaping subject to protection for lots developed with single-family residential or duplex residential uses is landscaping noted to be specifically conditionally approved to be maintained on an approved plan or other record on file with the City of Santa Barbara.
- B. **Original Planting Purpose:** The function or purpose of a tree or plant(s) on an approved landscape plan, sometimes explicitly stated, sometimes not. Example tree or planting purposes can include: privacy protection, insurance of sun access, shade provision, visual framing of a building, style consistency, visual interest, historic preservation, erosion control, appropriate species near a biologically sensitive area, etc.
- C. **Substantially Similar Tree or Landscaping Replacement:** Replacement trees or landscaping shall be considered “substantially similar” and therefore exempt from a CDD permit if they meet either of the following descriptions:
 - 1. The replacement tree or landscaping:
 - a. Is the same species of tree or plant(s) as the tree or landscaping being replaced; and
 - b. Can be replaced with a reasonably proportionate tree if a tree is involved, per Item 2.a., below; and
 - c. Is at least as large as the approved landscape plan tree or plant(s) planting size, and a minimum of five gallon planting containers for trees; and
 - d. Is compliant with applicable regulations, such as those listed in item 2.d., below.

OR

- 2. The replacement tree or landscaping to be replaced is a different species than the approved landscape plan species and the proposed species meets the following four criteria a., b., c. and d.:
 - a. The size of the removal or replacement meets the following applicable criteria:
 - i. Measurement of trees proposed for removal are less than 12” in diameter at 4’6” above the ground and less than 20’ tall; and

- ii. The area of cumulative changes to conditionally approved plants is less than 1,000 square feet in the front yard and less than 20% of the total landscaped area; and
 - iii. A vegetation removal permit is not triggered per SBMC §22.10.
- b. Characteristics of the proposed replacement tree or plant(s) species continue(s) to achieve the original planting purpose, as defined in 2.4.8.B, through the following tree or plant aspects:
 - i. height (at present and maturity); and
 - ii. canopy (at present and maturity); and
 - iii. general branching characteristics, and
 - iv. nature of the foliage; and
 - v. flowering characteristics (frequency, color, etc.); and
 - vi. drought tolerance; and
 - vii. water conservation of the existing plant or tree and the proposed replacement plant or tree; and
 - viii. biological compatibility with any surrounding biologically sensitive areas; and
 - ix. size of tree or plant(s) and their root structure at planting (must be at least as large as the approved landscape plan tree or plant(s), and if planting size is not indicated, then at least 5 gallons.); and
- c. The replacement is not likely to introduce new biological issues:
 - i. The replacement does not introduce non-native species in an area where native species are predominate; and
 - ii. Replacement does not occur within 50 feet from the top of a coastal bluff per California Coastal Commission regulations; and
 - iii. Replacement does not occur within 50 feet from the top of creek bank as established on an approved plan or section drawing. If there is not a top of creek bank identified on an approved plan or section drawing, then the top of creek bank will be determined; and
 - iv. Replacement does not occur within an area of 30% slope or greater; and
 - v. The replacement does not introduce an invasive or noxious species as defined in Appendix C of these design guidelines or California Codes 7206, 7207, 7501; and
 - vi. Native landscaping will not be removed.
- d. Complies with codes applicable to the proposed tree or plant(s) removal or replacements, including:

- i. Appeal Jurisdiction of Coastal Zone regulations
- ii. City Right of Way regulations (SBMC §15.20.110)
- iii. “Specimen” or “historic” tree requirements (SBMC §15.20.020 & §15.24.060); and
- iv. Front setback trees requirements (SBMC §28.04.435 & §28.04.620); and
- v. Parking lot landscaping regulations (SBMC §15.24.020)
- vi. Hillside Design District Vegetation Removal requirements (SBMC §22.68.060 & §22.10.040)
- vii. Automobile parking in a setback criteria (SBMC §28.90.001.H); and
- viii. Parking in front yard required screening (SBMC §28.90.001.I); and
- ix. Required screening for uncovered parking (SBMC §28.90.100.G); and
- x. Landscape water conservation requirements (SBMC §22.80); and
- xi. The replacement does not create water waste from plumbing and irrigation systems (SBMC §14.20); and
- xii. Storm Water Management Program (State Water Resources Control Board Water Quality Order 2003-0005-DWQ, City of SB SWMP); and
- xiii. High Fire Hazard Area requirements (SBMC §8.04.020) including Fire Department approval and compliance with distance and plant material requirements; and
- xiv. Solar Shade Control Act regarding protection of existing solar energy systems from shade caused by neighbors. (California Public Resources Code Sections §25980-25986); and
- xv. Maximum screen or hedge heights or sharp wire regulations (SBMC §28.87.170).

SECTION 5 Special Areas

2.5.1 Hillside Residential Landscape Design. Landscaping in hillside areas should be sensitive to the community’s view of the new development, as well as the view from the subject property. Plantings should soften the appearance of new building, major addition, and retaining wall project components. The following guidelines are specific to hillside areas of the City.

- A. **Appearance.** Landscaping should visually diminish the mass of structures as viewed from the community. Plantings should be selected from a palette of California native plants or Mediterranean plants that blend into the hillside and frame views. Plantings should not distract from the natural hillside profile. For example, palm tree installation would be discouraged, especially along

ridgelines. Also, brightly colored flowers such as begonias planted to cover large areas of publicly visible fences and walls would be discouraged because they contrast with the surrounding hillside when viewed from a distance.

- B. **Natural Surroundings.** Oak woodlands, steep slopes, bluffs, creeks, watersheds, or other native habitats should be evaluated by a biologist, arborist, or landscape architect to determine the appropriate landscape plant selection and maintenance to minimize negative effects on natural areas.
- C. **Grading.** Grading should be minimized.
- D. **Slope Failure.** In the event of slope failure, a soils engineer, geologist or landscape architect may be required to recommend appropriate mitigation for plantings and/or irrigation installation as well as erosion control measures.
- E. **Erosion Control Measures.** Erosion control measures should also be included on hillside landscape plans. Also, refer to the Seismic Safety Element Landslides Hazard Reduction recommendations section.

2.5.2 Creeks, Water Courses and Wetlands. Projects near creeks, water courses and wetlands are subject to the following guidelines. These projects should also be designed with special consideration for consistency with the Sustainability Principles outlined in Section 2.2.2.

- A. **Degradation Prohibition.** Development in and adjacent to creeks shall not degrade the creeks or their riparian environments. Where existing creeks, watercourses, and/or wetlands provide a natural environment, avoid removal of these environments.
- B. **Native Plant Species.** Protect, maintain, enhance, and/or restore native plant species and vegetation in areas along natural creeks, watercourses and wetlands.
- C. **Expert Use.** Consult a licensed landscape architect and/or biologist to provide recommendations and/or specifications to plant, protect or revegetate a site. In many cases, a biologist will be required to participate in the development of restoration and/or revegetation plans.
- D. **Immediately Adjacent Landscaping.** Only native, non-invasive vegetation shall be planted immediately adjacent to creeks, watercourses and wetlands. Also, see Conservation Element and Local Coastal Plan direction regarding development on bluffs.
- E. **Buffer Landscaping.** Vegetative buffers shall be provided between natural areas and developed or high-use areas. Buffer vegetation should be native, but may include non-native vegetation if it is non-invasive.

2.5.3 High Fire Hazard Area Landscape Design

- A. **Defensible Space.** Meet defensible space requirements around structures as required by the Fire Code, consistent with Fire Department High Fire Hazard Area Landscape Design Guidelines. The guidelines specify drought-tolerant, fire-resistant plants and plant placement to reduce wildfire hazards. Please consult with the Fire Department's Wildland Fire Specialist.

- B. **Native and Fire Retardant Vegetation.** Native and fire retardant vegetation must be used for major cut and fill slope landscaping where development occurs on hillsides. Within vegetation management areas as identified in the Wildland Fire Plan (Community Fuel Treatment Area and Vegetation Management Units) vegetation shall be designed to reduce the amount of flammable vegetation. Please consult with the Fire Department's Wildland Fire Specialist.

PART III

MEETING PROCEDURES

SECTION 1 Introduction, Interpretation and Application

The Historic Landmarks Commission (HLC) Meeting Procedures provide direction to HLC members and the public as a whole. Nothing herein shall be interpreted in a manner contrary to the requirements of State law or the Municipal Code and in the event of a conflict between the requirements of State law or the Municipal Code and these Guidelines, State law or the Municipal Code shall prevail. Staff will make periodic updates to the HLC General Design Guidelines & Meeting Procedures to implement preferred procedures and guidelines and reflect changes in the regulatory environment.

SECTION 2 General Information and Procedures

3.2.1 General Information

- A. **Meeting Dates and Location.** The full Commission HLC meetings generally occur every other Wednesday in the David Gebhard Public Meeting Room, Community Development Department, 630 Garden Street, Santa Barbara, California. The HLC meetings may be televised live on the local Government Access channel. Agenda items are scheduled as time-certain with the final item usually scheduled for no later than 6:00 P.M. Please note changes may occur to the meeting agendas due to postponement of items as described in Section 3.2.7.B.

If a holiday falls on Wednesday, meetings will be held on the following day or at the discretion of the Commission. The consent calendar review occurs at 11:00 A.M. on the same day and it is also held in the David Gebhard Public Meeting Room, 630 Garden Street, Santa Barbara, California.

Occasionally there is a need to cancel a regular meeting or to hold a special meeting. Dates and times of such meetings shall be posted in the usual manner as specified in Item 3.2.1.E "Notice and Posting."

In compliance with the Americans with Disabilities Act, if special assistance is needed to participate in this meeting, please contact the Planning Division at (805) 564-5470. Notification at least 48 hours prior to the meeting will enable the City to make reasonable arrangements.

- B. **Applications and Filing.** Application instructions are available at the Community Development Department/Planning and Zoning Counter at 630 Garden Street and online. Business hours are 8:30 A.M. to 4:30 P.M., Monday through Thursday and every other Friday. For a current list of office hours and a schedule of Friday closures, please visit the City's website at www.SantaBarbaraCA.gov, or call (805) 963-0611.

- Applications are accepted for the next available agenda based on a first-come first-served basis. Applications will be date-stamped and submittal times are logged to assist Staff in determining project priority. Projects requiring a noticed hearing will be scheduled accordingly after an application is received. For example, approximately two and one-half weeks is needed to schedule a project that requires a noticed hearing. Applications deemed incomplete by Staff or which have major zoning issues shall not be placed on an agenda. Staff will also consider the following factors when scheduling items: availability of City Staff, review level required, expected public comment, and number of items submitted.
- C. **Licensing Advisory.** The Business and Professions Code of the State of California and the Municipal Code of the city of Santa Barbara restrict preparation of plans for certain project types to licensed professionals. Applicants are encouraged to consult with Building and Safety or Planning Staff to verify licensing requirements for their specific projects.
- Unlicensed persons are limited to the preparation of HLC plans for:
1. Single or multiple family dwellings not to exceed four (4) units per lot, of wood frame construction, and not more than two stories and basement in height;
 2. Non-structural changes to storefronts; and,
 3. Landscaping for single-family dwellings. See additional information regarding landscape plan licensing advisories in Part II of these Guidelines.
- D. **Application Completeness.** Due to the high volume of projects that require HLC review, it is important for applicants to submit complete applications. (Please refer to the handout available at the Planning and Zoning Counter entitled “Design Review Submittal Packet,” which describes the elements of a complete application.) Failure to submit a complete application may result in Planning Staff refusing to accept the application at the counter or the inability to place a project item on the next available agenda. The HLC may deem an application incomplete, for example, if the application submittal lacks sufficient photographs or does not provide required information.
- E. **Notice and Posting.** Both the regular agenda and consent calendar are posted for public review on the outdoor bulletin board at 630 Garden Street adjacent to the David Gebhard Public Meeting Room, and in the public counter area at 630 Garden Street. Agendas and minutes are also available on the Community Development Department’s website at www.santabarbaraca.gov/HLC.
- F. **Fees.** Fees are based on the size, scope, and type of project proposed. Staff will determine appropriate application fees based on the current fee resolution adopted by the City Council. Staff at the Planning and Zoning Counter can provide the most recent information, and the fee schedule is available on-line at: www.santabarbaraca.gov/Resident/Home/Forms/planning.htm

G. Staff Contact

Community Development Department
Planning Division
630 Garden Street
Phone: (805) 564-5470 Fax: (805) 897-1904
Website: www.santabarbaraca.gov
e-mail: HLCSecretary@santabarbaraca.gov
or Planning Technician, in the following format:
FirstInitialLastName@santabarbaraca.gov

- 3.2.2 Agenda Organization.** Agendas for a meeting are organized on an approximate "time certain" basis. The following agenda order usually applies. However, the agenda times are subject to change in that an item may be heard either earlier or later than noted in the approximate schedule due to continuances or postponements of agenda items. It is recommended that people arrive at least 15 minutes before the approximate time for their item of interest because the actual timing of items is subject to change based on the length of other agenda items.

Instructions for the HLC regarding the review level that may take place for the project are indicated in bold face letters in parentheses under each project description.

A. General Business

1. Public Comment
2. Approval of minutes
3. Consent Calendar
4. Announcements
 - a. Staff Announcements such as requests by applicants for continuances and withdrawals, and future agenda items
 - b. Commissioner Announcements

- B. Subcommittee Reports:** Standing and Ad Hoc Subcommittees. These reports are brief announcements, and do not involve general HLC discussion or actions. If members wish to discuss the substance of a subcommittee report, members must request that staff properly agendaize the topic under "Discussion Items" at a future meeting of the HLC.

C. Discussion Items

D. Cultural Resource Studies

- E. Appeals:** Sign and Consent Calendar appeals.

F. Concept Review (continued items first, followed by new items)

G. Project Design Approval (continued items first, followed by new items)

H. In-Progress Review

I. Final Approval - Details (continued items first, followed by new items)

J. Review After Final Approval

3.2.3 Notices

- A. **Consent and Full Commission Items.** Some projects require a noticed hearing before the HLC. When a noticed hearing is required, written notice of the hearing is mailed to the applicant, the owner of any lot within 300 feet of the project and interested parties in the City database. In addition, a “Notice of Development” sign is posted on the site of the proposed project. For single-family residence projects, “door to door” flier noticing must be given to residents on the 10 closest lots. If a project requires another land use decision by the City Council, Planning Commission, or Staff Hearing Officer, the notice for the first Design Review hearing shall comply with the notice requirements for that hearing body. The purpose of these notices is to provide an early opportunity for adjacent property owners and occupants to comment on development proposals that may impact their property. (See SBMC §22.22.132 for the types of applications that require a noticed hearing and the specific noticing requirements).

If the Community Development Director or appointed representative determines that plan substitutions constitute a substantial change from the previously noticed plan (including, but not limited to, changes to the project’s, size, bulk, scale, form, or design), the Community Development Director or appointed representative may require the project to be re-noticed for another public hearing. The Community Development Director or appointed representative may also require an additional noticing fee to be paid by the applicant in these cases.

- B. **Pre-HLC Review Applicant Workshop.** Single family home project proposals in excess of 100% of the maximum FAR specified in the Municipal Code are required to have a workshop prior to the first HLC hearing for the project. The applicant is required to invite all property owners within 100 feet of the project to a workshop held at least 10 days after the workshop invitation is mailed. The workshop invitation must include a description of the proposed project. A workshop invitation must also be mailed to the City Planning Division to the attention of the HLC Planning Technician. The applicant must show plans and a project description at the workshop and listen to any neighbor concerns. The applicant is responsible for summarizing the workshop results to the HLC at the first Concept Review hearing.

3.2.4 Project Presentation/Plan Substitution

- A. **Plan Presentation.** All levels of review, with the exception of the consent calendar, require the presentation of the project by the applicant or the applicant's representative. If no one is available to present an item on behalf of the applicant, the agenda item shall be continued indefinitely. The applicant or the applicant’s representative will be responsible for rescheduling the project. Applicants may always submit additional information, architectural details, or notes on additional plan sheets at the hearing when the additional information is consistent with the agendized project (the plans submitted at the time the project was agendized).

- B. **Plan Substitution.** Plans originally submitted and filed for a particular meeting or review are generally not allowed to be substituted by applicants at the time of the scheduled meeting date. This policy is intended to ensure that approvals are not obtained without proper Staff oversight and to ensure an adequate opportunity for public review prior to the meeting. The exceptions to this general policy are explained below. Plans may not be substituted at the first mailed noticed Concept Review Hearing or when a project design or final approval is being requested.

Plans may be substituted at non-mailed notice concept or in-progress reviews if the following conditions have been met:

1. Proposed site plan does not have any changes that would require a Zoning Modification; and
2. Proposed building heights, site plans and elevations are substantially consistent with agendized plans; and
3. The project has the same level of zoning compliance as agendized plans; and
4. A completed Plan Substitution form is submitted to Staff. If the newly substituted plans are not substantially consistent with agendized plans, the new plans will be agendized for a future meeting.

3.2.5 Public Hearings and Public Comments

- A. Official public hearings, whereby a mailed notice of a project has been sent to nearby property owners and other interested parties, will be announced by the Chair as an opportunity for public comment prior to HLC comment on plans. No more than one mailed notice public hearing is required to be held at the HLC on any particular development project unless the project has changed substantially from the original application. For agenda items which are not official mailed-notice public hearings, the Chair will invite members of the public, who have submitted request to speak forms, to speak on the items prior to HLC comment. For all agenda items, speakers who wish to comment on a project may be asked to limit their speaking time to no more than two minutes. The HLC may adjust the length of time each person speaks based on the number of people who wish to speak. In order to manage meeting length, Staff will generally limit the total number of mailed noticed public hearings scheduled per HLC meeting to no more than four.
- B. The HLC recommends that interested neighbors work together either to organize their comments or to select one person to represent the neighborhood and speak on the group's behalf. The following examples of public comment types are appropriate:
- aesthetic issues
 - design issues
 - neighborhood compatibility
 - compliance with the "Good Neighbor Guidelines"

Comments on topics that may not be within the HLC's purview, such as the following, are discouraged:

- site land use or zone designation
- project affordability

- C. The HLC shall consider public comments directly related to aesthetic issues involving historic preservation, neighborhood compatibility, architecture and landscaping issues. The Commission may also consider neighborhood input regarding Neighborhood Preservation Ordinance compliance findings such as grading, tree removal and/or mass, bulk, and scale of the development. These general guidelines are in place to manage meeting duration each week.

3.2.6 Review Levels. See the HLC Checklist available at the Planning and Zoning Counter or the City's website for specific submittal requirements for each level of review.

A. Concept Review

1. Concept review is an informal review process during which no formal action is taken. Applicants are required to submit a complete site plan but encouraged to present project design sketches and/or conceptual drawings. HLC comments are made that give the applicant general directions for future review. Applicants are encouraged to respond to all HLC comments thoroughly in order to avoid more than two (2) concept reviews prior to Staff Hearing Officer or Planning Commission review, if possible.
2. The HLC may request a site visit or story poles to be placed at the site prior to taking action on the application. For single family homes, the HLC may also determine in Concept Review that additional submittals are required to help determine the project's consistency with Neighborhood Preservation Ordinance Findings

(See Section 3.2.8.B for a list of the findings). Additional submittals are required when a single-family home project exceeds 85% of the maximum FAR, unless waived by the HLC.
3. Concept review considers broad issues such as site planning, general architectural style and the project's relationship to its site and neighborhood.
4. Concept review is required prior to any other City reviews (such as environmental review, Planning Commission, etc.), and before any formal action is taken by the HLC. Project design approval is not usually granted at a Concept Review level. Generally, an application should receive "positive comments" from the HLC prior to the project's placement on another review body's hearing agenda.
5. A concept review does not result in formal action and, therefore, may not be appealed.

6. The Commission may move a concept review item to a project design review level and give a project design or final approval if sufficient information has been provided and no other discretionary review is required.
- B. **Planning Commission Comments.** SBMC Chapter §22.22 specifies that the HLC may refer projects which are highly visible to the public to the Planning Commission for comments prior to HLC's project design approval of a project.
- C. **Project Design Approval**
1. Project design approval is occurs prior to preparation of working construction drawings. The plans should reflect all applicable Planning Commission conditions and City Departmental conditions of approval.
 2. Project design approval is the most important approval of plans and determines the site plan configuration and design that must be followed in the working drawings. Any substantial design project changes after project design approval will require a new project design approval.
 3. All significant elements of the architectural appearance, landscaping and site/building orientation must be found consistent with applicable guidelines in order to receive approval at this level of review.
 4. Environmental review, Planning Commission approvals, and other discretionary review, if required, must be completed prior to project design approval.
 5. For purposes of Government Code §65950, a project design approval shall be considered to be "approval" of the project by the HLC and concludes the discretionary phase of project review. It shall constitute the substantive HLC design approval of the project which is appealable; however, final approval of all details, including landscaping, is still required prior to issuance of building permits.
- D. **In-Progress Review.** Applicants are encouraged to schedule an "in-progress review", which occurs after project design approval. If the HLC has expressed concern about a specific item (e.g. details, colors, etc.), the applicant may be requested to submit "in-progress" drawings to assure that the drawings are consistent with the project design approval.
- E. **Final Approval.** Final approval of completed working construction drawings occurs prior to submittal for a building permit.
1. Final plans will be approved if they are in substantial conformance with the plans given project design approval. If the applicant proposes substantial changes to the plans after project design approval, a new project design approval will be required. All Planning Commission Conditions of Approval shall be included on the plans.

2. All details, color samples, door hardware, and exterior lighting fixtures shall be included for review. The “Design Review Final Approval Submittal Checklist” indicating sheet numbers where plan details are located within plan sets must be submitted with the final proposed details.
 3. A final approval may be obtained subject to conditions that allow minor details to return on the consent calendar.
- F. **Review After Final.** “Review after final” occurs when there is a proposed change to a project after final approval of the project has been granted. Plans submitted should include all information on drawings which reflect the proposed changes. If changes are not clearly delineated or shown, they cannot be construed as approved. Additional fees are charged for a “review after final approval”. Any changes to a project for which “review after final approval” is requested shall be subject to a substantial conformance determination for conformance with the final approval.
- G. **Consent Calendar.** The consent calendar is meant to expedite the review of minor projects. One HLC member who is assisted by Staff reviews the calendar. Applicants are advised to attend but are not required to attend or make a presentation of the project. A recommendation regarding each item on the calendar is made to the full HLC for action. Such recommendation is not final until acted upon at an HLC full Commission hearing. The HLC may take an item off the consent calendar to be considered by the Full HLC. The HLC may also direct some projects or portions of projects to the consent calendar for review. In addition, Staff has been delegated the discretion to place the following items on the consent calendar when appropriate:
1. General
 - a. Minor door and window changes in existing facades if changes match the existing building.
 - b. Additions of trash enclosures if they meet minimum ordinance requirements, complement the building’s architecture, and are not within public view.
 - c. Additional landscaping on an existing site or minor changes to proposed landscaping of an approved project.
 - d. Addition of parking spaces where no landscaping will be removed and minimum ordinance requirements are met.
 - e. Minor exterior or site changes such as awnings or color changes.
 - f. Second or third time extensions for final approvals for minor projects.
 2. Single Family Residential Projects
 - a. Minor upper floor addition where the upper story already exists and the amount of proposed square footage is small.
 - b. Any project within categories listed below under “Minor Single Family Residential Projects Eligible for Administrative Staff Approval.”

- H. **Minor Projects Eligible for Administrative Staff Approval.** Some minor design projects may be approved as a ministerial action by the **Community Development Director or appointed representative** without review by the HLC. The Community Development Director or appointed representative has the authority and discretion to refer any minor design project to the HLC if the project has the potential to have an adverse effect on the architectural integrity of the building, structure, or surrounding property. HLC Staff also may refer any projects which do not appear to comply with applicable design guidelines to the HLC consent calendar or full Commission. Projects eligible for Administrative Approval are listed in Part I “Architectural Design”, Section 3 “Administrative Approval Standards” and must comply with applicable standards listed in the section.
- I. **Construction Without Permit (“As-Built”).** The HLC shall review as-built applications with the same degree of scrutiny and consideration afforded other proposed new projects utilizing the following criteria:
 - 1. As-built work shall comply with all adopted design guidelines or be made to comply.
 - 2. As-built work constructed or completed without benefit of review by the HLC may be subject to denial if the work is deemed unacceptable.
 - 3. Materials used and construction quality shall be evaluated by the HLC when determining if the as-built work is acceptable as constructed.

3.2.7 Procedure for Continuances, Postponements, Referrals, and Absences

- A. **Continuances.** A continuance is the carrying forward of an item under discussion to a future meeting. To be considered for a continuance, the applicant must attend the meeting and make a presentation. An application may be continued (i) at the request of the applicant, or (ii) by action of the HLC. Unless a continuance is necessary in order for the HLC to receive reports or other information, the HLC Chair may offer the applicant the option of agreeing to the continuance or requesting that the HLC give the project an up or down vote at the present meeting. A noticed hearing item may be continued without re-noticing to a “date certain” or “indefinitely”.
- B. **Postponements.** A postponement is deferral of the consideration of an agenda item to a future meeting. No discussion or presentation takes place on the date a postponement occurs. To be considered for a postponement, the applicant must contact HLC Staff prior to the meeting date and state the reason(s) justifying the postponement. A noticed hearing item may be continued to a “date certain” without re-noticing, or may be continued indefinitely, subject to the required proper re-noticing. If an application has been postponed more than twice, the HLC may deny the application “without prejudice” to a future application. Without prejudice means the HLC will have no reservations or pre-formed opinions in reviewing a resubmitted project.

1. If an applicant fails to request a postponement before 4:30 p.m. on the Tuesday of the week prior to the meeting date, the item will be postponed indefinitely. It is the applicant's responsibility to contact staff in order to reschedule the item for consideration. An applicant who fails to timely request a postponement shall pay a rescheduling fee.
 2. The agenda schedule is subject to change as cancellations occur; applicants are encouraged to arrive 15 minutes early. Applicants who arrive late for their scheduled agenda item may be postponed indefinitely unless the HLC agrees to hear the item and if time permits.
 3. HLC Staff may rearrange the agenda item order after agenda publication in order to minimize time gaps in the meeting due to cancellations or postponements. The HLC Staff-person may also consult with the HLC Chair to assist in scheduling discussion items and to determine appropriate time allocations for projects when long agendas are planned.
- C. **Referral from Consent Calendar to Full Commission.** All actions on consent calendar items are subject to ratification by the full commission. Anyone may request that a consent calendar item be referred for full commission review. Anyone making such a request must state the reasons for the referral request. If a motion to refer an item to the full commission carries, the item will only be reviewed by the full commission that day if an announcement regarding the potential referral was made during the item's consent calendar hearing. If no announcement was made during the consent calendar hearing, then the referred item will be continued and listed on a subsequent full commission agenda. If an applicant chooses not to be present for the full commission review, Staff will notify the applicant if the HLC could not approve the consent calendar item as presented, and the item has been continued for further review on the next available agenda.
- D. **Absences at Consent Calendar.** Although not recommended, applicants need not be present for consideration of items on the consent calendar. Staff may present projects when applicants are absent. However, if an applicant does not attend the consent review, project design approval may be delayed. If an applicant is absent, the project design will not be denied on the consent calendar, instead, the project will be continued indefinitely.

3.2.8 Decisions

- A. **Project Compatibility Analysis.** SBMC §22.22.145 sets forth six criteria which the HLC must consider in the review of development projects.
- B. **Findings to Approve a Project.** In order to grant a project design approval, the HLC shall make a finding that the project is consistent with any applicable laws and guidelines. Specific project types also require special findings, as follows.
 1. **Historic Findings of No Substantial Adverse Effect.** The California Environmental Quality Act (CEQA) requires that there be no substantial adverse change in the significance of a historical resource for a project to be categorically exempt from CEQA environmental review procedures.

Where applicable, the HLC finds that there will be no substantial adverse effect on historic resources when approving projects.

2. **Special Findings for the R-0 Zone.** The HLC must find that the design and appearance of an office building is designed to be compatible with existing and possible future adjacent residential uses if the property is within EPV or another landmark district or if the structure is a designated City Landmark. This finding does not restrict the HLC from requiring some exterior remodeling, painting or other improvements before a residential building is converted to office use (SBMC §28.48.115).
3. **Special Findings for the C-O Zone.** The HLC must find that the design and appearance of an office building is designed to be compatible with adjacent residential uses if the property is within EPV or another landmark district or if the structure is a designated City Landmark. (SBMC §28.51.115).
4. **Special Findings for Wireless Antennas.** The HLC must take action to minimize adverse visual impacts associated with wireless antennas and equipment installation. The HLC shall consider compatibility with nearby buildings, appropriate screening, site location, antenna color and size in order to find no adverse visual impacts will result.
5. **Special Findings for Vegetation Removal Permits** (SBMC §22.69.050.D)

For vegetation removal permits reviewed by the HLC, the following three additional findings must be made for project design approval:

- a. Will result in no significant increase in salutation or decrease in water quality of streams, drainages or water storage facilities to which the property drains; and
- b. Will result in no substantial loss of southern oak woodland habitat; and
- c. Complies with Chapter §22.10, "Vegetation Removal" applicable provisions.

C. **Findings to Approve a Project – Single Family Residence**

1. **Neighborhood Preservation Findings (SBMC §22.69.050.A) – All Single Family Residential Projects.** In order to approve a project referred to the HLC pursuant to SBMC §22.69.030, the HLC shall make the findings outlined in Subsection A of SBMC §22.69.050 and included in the Single Family Residence Design Guidelines. If a project is approved administratively by staff per provisions in these HLC General Design Guidelines & Meeting Procedures, then NPO Findings are not required. Ten Neighborhood Preservation Ordinance findings must be made for all single family residential projects approved by the HLC.
2. **Hillside Design District and Sloped Lot Findings – Neighborhood Preservation Ordinance.** (SBMC §22.69.050.B) In the Hillside Design District or on a lot or a building site that has an average slope of 15% or

more, two additional findings must be made for project design approval.

3. **Grading Permits.** (SBMC §22.69.050.C) Any application for grading permits reviewed by the HLC pursuant to SBMC §22.69.020.C.11 & E, in addition to the NPO findings specified above, two additional findings must be made for project design approval.
 4. **Zoning Modification of Net Floor Area.** (SBMC §28.92.110.A.6) Applications requesting a modification to exceed the allowable maximum floor area must receive votes in support of the modification following a concept review of the project from not less than six (6) members of the HLC (on projects referred to the HLC pursuant to §22.69.030).
- D. **Project Denials.** The HLC may deny a project that is inconsistent with any applicable guidelines or any applicable findings. The HLC should state the reason(s) for a project denial in the motion for denial.

3.2.9 Action, Appeals and Expiration of Approval

- A. **Time Limits on Approvals.** Conceptual comments are generally valid for one year, at the HLC's discretion. Per SBMC §22.22.180, HLC project design approval is valid for three years from the date of the approval unless a time extension has been granted or a building permit has been issued. Also see SBMC §28.87.370 for provisions for projects with multiple approvals.
- B. **Time Extensions.** Time extensions are regulated by SBMC Chapter §22.22.180 and SBMC §28.87.370.
 1. **Project Design Approval Extension.** See SBMC §22.22.180.
 2. **Projects with Multiple Approvals.** See SBMC §28.87.370.
- C. **Appeal of HLC Decision.** Any action of the HLC on an application for project design approval or final approval may be appealed to the City Council in accordance with SBMC §22.22.170.A and Chapter §1.30. The standards of review at each level of review are explained in Section 3.2.6. If a project is approved by the HLC, the project design approval decision is the critical decision on the design elements of the project that should be appealed. Otherwise, the final approval decision may be appealed only on the basis that it is inconsistent with the project design approval. If a project was granted an approval without a project design approval decision, the final approval decision is the substantive decision that may be appealed. The letter of appeal stating the reasons for the appeal must be filed with the City Clerk within ten (10) calendar days of the contested action together with the appropriate appeal fee.
- D. **Re-Filing a Denied Project Design.** When the design of a project has not been approved by the HLC, the same design application cannot be re-filed with the HLC for one year, unless the design is substantially changed from the original. Changes to a denied project design refiled within one year must mitigate the reason for denial of the project design.

- E. **Appeal of Sign Committee Decision.** Appeals must follow the sign ordinance procedures and will be placed on the next available HLC agenda. After considering the appeal the Commission takes a vote to grant, modify the action, or deny the appeal.

3.2.10 Plan Check and Building Permit

- A. **Cursory Plan Review.** All development applications are briefly reviewed prior to HLC agenda placement for basic zoning compliance. The project applicant is responsible for verifying compliance with all applicable codes and regulations.
- B. **Preliminary Plan Review.** Staff reviews plans for compliance with Zoning Ordinance and checks records for the property as needed to verify ordinance compliance.
- C. **Building Plan Check.** Following Final HLC Approval, applicants may submit plans to the Building and Safety Division for plan check. HLC Staff is not responsible for routing plans to Building and Safety for building permits. If any changes are made to plans during the Building Plan check code compliance process that would alter the exterior appearance of the building(s), Staff shall decide if the revised plans require further HLC review. When the plans have completed the plan check process and all corrections have been made, HLC Staff will stamp the plans and sign the zoning clearance/Design Review approval stamp in order to allow issuance of a building permit.
- D. **Building Permit.** Building permits are required to be issued for most HLC approvals in order to verify and inspect compliance with HLC approvals. Changes to a project during construction may necessitate review after final approval by the HLC or Staff.

SECTION 3 Jurisdiction

3.3.1 HLC Jurisdiction: General

SBMC Chapter §22.22 grants the HLC the power and duty to review plans for exterior alteration, demolition, relocation, moving or construction of projects in specific city locations. One of the principal duties of the Commission is to review projects within El Pueblo Viejo, which now encompasses the original historic core of the City, the areas around the Mission, the oceanfront, and the scenic entrances to the City (see accompanying map).

The HLC also has the power to recommend to the City Council that certain structures, natural features, sites, or areas having historic, architectural, archaeological, cultural, or aesthetic significance be designated a Landmark. The Commission may also designate Structures of Merit. It may also perform other duties or functions prescribed by ordinance.

Design Review: The HLC shall review and take action to approve, conditionally approve, or deny all applications for:

1. **Construction, Demolition, Relocation or Exterior Alterations:** All construction upon, demolition, relocation, or exterior alterations of any property within Landmark districts, including landscaping, site plans, exterior paint, courtyards, and any other visual characteristics.
2. **Alteration of a Landmark:** Any Landmark that is proposed to be altered on the exterior, moved or demolished. A Landmark may only be proposed for demolition if it is damaged by Act of God, and approval may only take place under certain conditions.
3. **Signs:** The review of signs in the City is under the authority of the Sign Committee. Appeals of Sign Committee decisions are reviewed by the HLC if the property is within El Pueblo Viejo or other Landmark districts.
4. **Highway 101 Improvements:** Improvements to Highway 101 or appurtenant highway structures in the El Pueblo Viejo Landmark District which require a Coastal Development Permit located within the Highway 101 Santa Barbara Coastal Parkway Special Design District. See SBMC §22.22.
5. **Historic Resources:** Projects involving structures identified as a potentially significant historic resource through a study or by inclusion on the City's "Potential Historic Resources List" referred to the Historic Landmarks Commission for Design Review recommendations.
6. **Other Applications:** Applications for new construction or for alterations on structures outside of Landmark districts may be referred to the HLC for architectural or historical comments and suggestions.

Minor exceptions from Commission review specified in the "Minor Projects Eligible for Administrative Approval" section of this document may be allowed subject to the review of the Community Development Director or appointed representative.

Historical Designations. The HLC has the following duties relative to the identification of historic structures:

1. The HLC conducts a continuing survey of all structures, natural features, sites, and areas in the city of Santa Barbara having historical, architectural, archaeological, cultural, or aesthetic significance and which may be eligible for designation as Landmarks or Structures of Merit.
2. The HLC studies, reviews, and evaluates proposals for the designation of Landmarks, Structures of Merit and Historic Districts to determine eligibility.
3. The HLC recommends Landmark and Historic District designations to City Council for final action.
4. The Commission itself may designate Structures of Merit.

Handouts on the designation categories are available as separate City publications. In addition to the above listed duties, the HLC: Renders advice and guidance to the public; serves as an advisory resource to all agencies in matters pertaining to its jurisdiction; explores means for the preservation, restoration, and appreciation of architectural and historical resources; reviews cultural studies, encourages efforts by and cooperation between individuals, organizations, and governmental agencies concerned with preservation of the City's architectural, environmental, and cultural

heritage; and, encourages public understanding and appreciation of the unique heritage of the City through educational and interpretive programs.

3.3.2 HLC Jurisdiction – Single Family Residential

Project applications on a lot with one single-family residential unit or related accessory structures in any zone are usually subject to SFDB review if:

- a building permit is required to construct, alter, or add to the exterior of a structure and one of the project components listed on the table on the following page is included; or
- a building permit is required for grading or a retaining wall which includes a project component listed on the table on the following page.

Projects involving designated and potentially historic homes and homes in landmark districts that would otherwise be subject to review by the SFDB in accordance with SBMC Chapter §22.69 are referred to the HLC pursuant to SBMC §22.69.030.

3.3.3 Scope of Project Review. For projects within its jurisdiction, the HLC has the authority for approval, conditional approval, or denial of projects as follows:

- A. **Standard Review.** If a single-family residential project is “triggered” for Design Review per the City’s Municipal Code, then the HLC has the purview to review all exterior aspects of the project. The scope of review is on how the project is consistent with the Single Family Residence Design Guidelines topics of site planning and structure placement, neighborhood compatibility, two-story design concepts, hillside housing guidelines, and good neighbor guidelines as well as consistency with architectural and landscaping guidelines listed in Part I and II of this document. The Santa Barbara Municipal Code also specifies that any work which received Design Review approval within the previous two years is also considered part of the project to discourage application “piece-mealing.”
- B. **Focused Review.** Per SBMC §22.69.020.C.8, the construction, alteration, or addition of a wall, fence, or gate in the front yard of a lot that is three and a half feet (42”) or greater in height, excluding walls, fences, or gates that are constructed along the interior lot lines of the lot, shall be referred to the HLC for review of the proposed wall, fence or gate. If no other project components require Design Review, then only the wall, fence, or gate will be reviewed. The same principle applies to retaining walls triggered for review under SBMC §22.69.020.G.

Single Family Residence
Building Permit Project Components Which Can Trigger
Historic Landmarks Commission Review

<p style="text-align: center;"><u>SPECIAL DISTRICTS</u></p> <ul style="list-style-type: none"> • Located in the Mission Area Special Design District (within 1,000 ft. of EPV II) (SBMC §22.69.020.B.1) • New development only in the Lower Riviera Survey Area – Bungalow District (SBMC §22.69.070.E). Existing development is reviewed on a case-by-case basis (SBMC §22.69.020.B.1 and SBMC §22.69.070) • Located in the Hillside Design District (HDD) <u>AND</u> the average slope of the lot or building site is 20% or greater; (SBMC §22.69.020.B.2) • Located in the Hillside Design District and on any slope, the replacement of an existing roof covering with a roof covering of different materials or colors (excluding "like for like" re-roof) (SBMC §22.69.020.B.2) <p><u>BUILDING HEIGHT AND FLOOR AREA</u></p> <ul style="list-style-type: none"> • If the building is taller than one-story or taller than 17' in height (measured from natural or finished grade, whichever is lower). (SBMC §22.69.020.C.1, .2 & .3) <p>Exceptions:</p> <ol style="list-style-type: none"> Alteration on the first floor below 17' only. Proposed construction is one story, under 17' tall, and does not significantly alter a second floor (see illustration examples available at the public Planning and Zoning Counter). Any combination of a. or b., above. <ul style="list-style-type: none"> • Net floor area of all stories of all buildings on the site (including garages and carports) will exceed 4,000 square feet (SBMC §22.69.020.C.4). • Modification to exceed a maximum floor area is required. (SBMC §22.69.020.C.5) <p><u>PREVIOUS APPROVALS/CONSTRUCTION</u></p> <p>Design Review was previously required in the past two years (from Certificate of Occupancy); or if the cumulative scope of work from permits in the past two years will trigger Design Review (SBMC §22.69.020.J)</p>	<p style="text-align: center;"><u>WALLS, FENCES AND SECOND STORY DECKS</u></p> <ul style="list-style-type: none"> • Construct, alter, or add a deck or balcony on the second or higher floor (including roof decks) that will be greater than 3' deep <u>or</u> 7' wide (SBMC §22.69.020.C.6) • Walls, fences, or gates greater than 3.5' in height located in any portion of the front yard, excluding those along interior lot lines. (SBMC §22.69.020.C.8) • Retaining walls anywhere on a site 6' or greater in height (SBMC §22.69.020.C.7) • Retaining walls located on a lot or building site with an average slope of 15% or greater; (SBMC §22.69.020.G.1) • Retaining walls located on a lot adjacent to or on a lot that contains an ocean bluff; (SBMC §22.69.020.G.2) • Multiple retaining walls with a combined height of 6', that are not separated by either a building or 10' of horizontal distance (SBMC §22.69.020.G.3) <p><u>OTHER</u></p> <ul style="list-style-type: none"> • Installation of a manufactured home, mobile home, or factory built home (SBMC §22.69.020.C.9) • Relocation in whole or in part of a single family residential unit (SBMC §22.69.020.C.10) • Subdivision grading plans – in single family zones only (SBMC §22.69.020.D) • Grading on a vacant lot in a single family zone (alone or in combination with other work). (SBMC §22.69.020.E) • Grading outside the main building footprint is proposed of more than 50 cubic yards in the Hillside Design District or more than 250 cubic yards in other areas. (SBMC §22.69.020. C.11) • Vegetation removal permit (SBMC§22.69.020.F) • Parking exception for two uncovered spaces is requested (SBMC §28.90.100.G.1.c)
---	--

3.3.4 Subdivision Grading Plans. Applicable in single-family zones only (SBMC §22.69.020.D). The following project aspects will be reviewed for these projects after any applicable Pre-Application Review Team review is completed.

A. Site Design

1. Consistency with Single Family Residence Design Guidelines (SFRDG) 1 (Environmental Setting and Landscaping), 2 (Site Planning and Structure Placement), and 33 (Neighborhood Compatibility).
2. Layout of lots and suitability of development for future building pads and building envelopes.
3. Consistency with Hillside NPO finding for protection of natural topography.
4. Public/private roadway improvements, pedestrian sidewalks and parkways.
5. Alignment of driveways, lengths, and quantity of pavement proposed.
6. Proposed entryway and pathway identification to front doors leading from streets.
7. Degree of access that can be provided to lots and to future homes for visitors.
8. Compatibility of design with surrounding neighborhoods in terms of lot sizes and building heights, building sizes, and building massing. If necessary, the HLC may request additional information to complete analysis of this item.
9. Pedestrian connectivity to adjacent neighborhoods and community uses.
10. Preservation of any existing significant public scenic views of and from the hillside.

B. Grading. Consistency with NPO grading findings and SFRDG 30 (Grading) and 31 (Grading for Driveways), including appropriateness of grading quantities and cut and fill locations to avoid visible scarring.

C. Retaining Walls, Fencing and Entry Gates

1. Consistency with SFRDG 35 (Retaining Walls), regarding heights, lengths, materials, design and locations.
2. Lot lines follow terrain and allow for reasonable development and would not promote construction of tall retaining walls or unusual fencing patterns on steep slopes.
3. Neighborhood compatibility of any security gates.

D. Site landscaping - Conceptual Landscape Plan

1. Consistency with SFRDG 1 (Environmental Setting and Landscaping).
2. Street tree types and locations.
3. Preservation of trees where possible.
4. Evaluation and mitigation of any tree removals.
5. Screening of site (if deemed appropriate).

E. **Site Drainage Facilities**

1. Consistency with SFRDG 4 (Permeability) to maximize site permeability.
2. Drainage conveyance and retention systems, including appropriateness of any proposed fencing.
3. Storm Water Management Program compliance.

F. **Site Utilities**

1. Electrical distribution equipment and transformer locations.
2. Gas metering locations, Fire Department backflow and cross connection devices.
3. Central mailbox locations, if applicable.

G. **Parking Design.** Location of proposed on-street and off-street parking and consistency with SFDG 5 (Parking Aesthetics).

H. **Privacy Design.** Lot layout provides for sufficient setbacks between structures to create privacy between neighbors and compliance with Good Neighbor Guidelines.

I. **Solar Access.** Consistency with SFDG 3 (Solar Design) regarding orientation of homes for the use of active and passive solar energy systems. Review of existing site trees that may impact solar energy use.

J. **Staff Hearing Officer and Planning Commission Purview.** The following project elements are under the purview of the Staff Hearing Officer and Planning Commission Purview and do not require comments from the HLC.

1. Compliance with State Subdivision Act rules and regulations (e.g. avoidance of flag lots).
2. Compliance with city of Santa Barbara General Plan.
3. Compliance with city of SBMC Title 27 “Subdivisions”, including Findings, listed in §27.07.100.
4. Appropriate residential density and lot sizes.
5. Appropriate public or private street design.
6. Traffic issues/impacts (i.e.: impact of additional traffic on existing neighborhoods or need for street lights).
7. Setting of building envelopes and areas of restricted development.
8. Protection of public view corridors from public streets, trails, parks and beaches.

3.3.5 **Signs.** Conforming. and Consent review of signs is under the authority of the Sign Committee. Full commission review of signs is conducted by the Historic Landmarks Commission if within El Pueblo Viejo or other landmark districts and by the ABR if within the remainder of the City (SBMC §22.70.050).

SECTION 4 Meeting Conduct

3.4.1 General Procedures

- A. **Robert's Rules of Order.** The HLC has adopted Robert's Rules of Order for the formal conduct of meetings. Robert's Rules of Order shall govern the conduct of meetings unless otherwise provided by these guidelines or as may be determined appropriate by the Chair of the HLC. However, the general meeting procedures tend to be less formal.
- B. **Discussions Outside of Regularly Noticed Meetings.** It shall be a general policy of the HLC that private discussions between applicants and HLC members or groups of HLC members, shall not be initiated or encouraged by HLC members. If a discussion does occur, it does not constitute official action or recommendations of the HLC and does not reflect the consensus of the entire HLC, nor shall it be construed as an interpretation of the HLC's policies. HLC members are encouraged to inform the HLC of such ex-parte discussions at regularly scheduled meetings.
- C. **Quorum.** Five members constitute a quorum of the HLC. A member who remains present but abstains from voting counts as part of the quorum while a member who steps down (and is required to leave the room) does not count towards the quorum. Any member with a disqualifying conflict pursuant to the Political Reform Act shall step down and not be counted toward achieving a quorum. No project design or final approval shall be given unless at least five members vote on the motion. For single family residential projects proposing square footage over a maximum required floor area, at least six members must be present to consider the item. If less than six members are present, such items must be postponed.
- D. **Abstention on Continued Items.** The intent of this procedure is to ensure fair project reviews by the HLC with consistent direction on projects. A commissioner who was absent in a previous review should only comment on a continued project if the member has become informed with the previous discussion. Comments should only be made if the commissioner has reviewed the plans, reviewed the video of the hearing and read the minutes of the relevant portions of that meeting. If a commissioner has not fully informed himself or herself concerning prior HLC review, the member should abstain from commenting or voting on the project. If a commissioner abstains from a vote because the commissioner missed a prior meeting, but remains present for the discussion and vote, the commissioner's presence counts toward the quorum. For minor projects which received a very brief review, it may not be necessary for commissioners to review the video of the project's hearing.

Once a project has received a project design approval, commissioner comments on projects in the final approval phase of review should only address whether the design proposed for a final approval substantially conforms to the design that received project design approval. Commissioners should avoid revisiting concept review issues.

- E. **Reconsideration.** A motion to reconsider any action taken by the HLC may be made only at the meeting at which the original action is taken or at the next regular meeting of the HLC. A motion to reconsider may be made only by a commissioner who voted with the prevailing side on the original action. In order to allow for compliance with Brown Act requirements, if a motion to reconsider is not made during the meeting at which the original action is taken, a commissioner who wishes to make such a motion must provide staff with a written request to place the motion to reconsider on the agenda of the next regular meeting of the HLC before the end of the second business day following the day on which the original action was taken.
- F. **Brown Act Meeting Rules.** HLC meetings, including meetings of HLC standing subcommittees, shall be governed by the Ralph M. Brown Act (Govt. Code §54950 et seq.).
- G. **Conflict of Interest.** Members must comply with all laws and regulations prohibiting participation by officials in making decisions for which they may have a conflict of interest under State law, in particular the Political Reform Act of 1974.
- H. **Staff Assistance.** Staff shall assist the HLC and the general public through the HLC process. Any Staff comments shall be stated at the beginning of each review.
- I. **HLC Member Attendance.** If a member cannot attend a meeting, or must step down from a particular item due to conflict of interest, the member is asked to contact Staff at the earliest possible opportunity prior to the meeting date. The purpose for this staff notification is to ensure a minimum quorum of members is maintained for review of all items.
- J. **HLC Member Compensation.** Per Council direction, members may receive \$50 compensation for each full Commission meeting attended and \$25 for each consent calendar meeting completed.
- K. **HLC Member Site Visits.** A site visit may be conducted to a proposed development site when additional site information is required prior to HLC comment or action on a project. Staff shall notify HLC members and the public of scheduled organized or drive-by site visits via notation on the meeting agenda.
- L. **Story Pole Requirements.** The HLC may require story pole installation by applicants to gain a better understanding of the proposed height, size, bulk, and scale of a project and its relationship to the surrounding community and potential view impacts. Coordination with the Planning Commission for story pole placement and site visit is recommended. The installation shall follow the City's adopted criteria for story pole placement and installation standards. See Section 6, Story Poles of this Part III, for more information about residential story pole requirements.

3.4.2 Officer Election

- A. **Chairperson.** As soon as practical following the first day of January of every year, the HLC shall elect one of its members to serve as Chairperson. An election is also held as soon as practical in the case of an unexpected chairperson vacancy.
- B. **Vice Chairperson.** Following the election of the Chairperson, the HLC shall elect a Vice-Chairperson who will conduct meetings in the absence of the Chairperson.

3.4.3 Subcommittees/Advisory Committees.

The HLC may establish subcommittees comprised of three or fewer members appointed by the Chairperson and confirmed by a majority vote of the HLC. The following are subcommittees or advisory committees to which the Commission appoints representatives.

- 1. Visual Arts in Public Places Committee.
- 2. The Sign Committee has not less than one appointed member and one alternate from the Commission who serve on this Committee.

Historic Landmarks Commission permanent subcommittees:

- 1. The Archaeology Subcommittee, which advises on archeological studies.
- 2. The Designations Subcommittee, which investigates requests for designations and recommends to the full Commission the designation of historical resources as Structures of Merit, or that it consider recommending a Landmark designation to City Council.
- 3. The Survey Subcommittee, which conducts ongoing historical and architectural surveys of areas of the city.

SECTION 5 Single-Family Submittal Requirements

For submittal requirements specific to single-family residences, see the Planning Division handout “Single Family Residential Supplemental Design Review Submittal Packet”. The HLC may require additional plan submittals beyond those outlined in the handout if needed to determine project consistency with required findings for any project. Staff may make recommendations to both the HLC and applicants regarding the potential applicability of submittal requirements for any project. The HLC may also waive additional submittal requirements listed in the handout, if the submittals would not help the Commission determine consistency with required findings for a project.

Single Family Residence Vacant Hillside Design District Lots Special Submittal Requirements. Complete engineering details must be submitted prior to obtaining Final HLC approvals for vacant lots in the Hillside Design District.

SECTION 6 Visual Aids, Including Story Poles

3.6.1 Purpose. The purpose of visual aids is to assist HLC, staff, applicants, and public in the review of projects to determine consistency with the General Plan and the Local Coastal Plan Land Use Element and Conservation Element. Visual aids are also used by review bodies to make findings necessary to approve Coastal Development Permits, Development Plans, many Tentative Subdivision Maps, Conditional Use Permits, Neighborhood Preservation Ordinance (NPO) projects and other land use entitlements. Historic Landmarks Commission (HLC) approvals may also require visual aids above and beyond the required photographs as described in the application. These approvals all require findings regarding appropriate size, bulk, and scale, neighborhood compatibility, and/or minimizing impacts on important public scenic views. These visual aids may also be needed to determine whether the project will result in significant environmental impacts on important public scenic views for environmental review as required for California Environmental Quality Act.

3.6.2 Definition. “Visual aids” may include, but are not limited to, story poles, photo simulations, and other means such as models (physical or computer simulations). The visual aids allow a better understanding of a project’s size, bulk, and scale in relation to the neighborhood and/or its effects on important public scenic views. In most cases, story poles are the primary visual aid used. Specific information describing these visual aid requirements and story pole installation standards are outlined in two documents and may be accessed on the city website (www.santabarbaraca.gov) or at the Public Planning and Zoning Counter:

- “Story Pole and Visual Aid Requirements- Planning Commission Projects.”
- “City of Santa Barbara Neighborhood Preservation Ordinance Story Pole and Visual Aid Requirements for Single Family Residential Projects.”

3.6.3 When Required. The HLC or Staff may request visual aids, such as photo simulations, three-dimensional massing models, perspective drawings, rendered streetscape elevations, and/or comparative building studies as well as story poles. HLC visual aid requests are made on a case-by-case basis, based on the HLC’s determination of what media will satisfy cost effectiveness and explanatory goals.

3.6.4 Other Visual Aids. In some cases, additional visual aids may be required or recommended. The requirements for these are outlined below.

A. Photo Simulations. These may be required on a case-by-case basis, as determined by the Planning Division.

1. Photo simulations shall be completed using either panoramic photographs or several photographs put together. Polaroid photographs are not acceptable. A computer simulation may be used. Photo simulations shall be mounted and be foldable to 8½” x 11” size.
2. At a minimum, the proposed project shall be shown as an overlay over the existing property, showing the existing buildings on either side of the proposed project for a minimum of one parcel in either direction. The photographs should be taken at eye level (approximately 5 feet above grade). Reduce proposed building elevations to match the scale of the

photographs and overlay on the site photograph. Color the elevation to match the proposed materials. If landscaping is shown, it shall be shown at no more than five (5) years' growth unless it is included as a separate overlay. It is important to verify the accurate depiction of plate height, overall roof height and other measurements.

3. Include a map or plan showing the locations from which the photos were taken and the direction of the photos (i.e., with an arrow), keyed to photos.
- B. **Three-Dimensional Massing Model.** In some cases, a massing model showing both the project and structures in the immediate neighborhood may be required, as determined by the Planning Division. Design details are not required; however, all roofing variations, wall articulation and eave lines (including plate heights) must be shown. Major trees should also be included as part of the model. Changes in topography in the area covered by the model must be shown accurately.
 - C. **Perspective Drawings.** In some cases, perspective drawings from one or more prominent viewpoints may be required, as determined by the Planning Division. All roofing variations, wall articulation and eave lines (including plate heights) must be shown. Major trees should also be shown. These drawings must be drawn from the viewpoint of a person (approximately 5 feet above grade).
 - D. **Rendered Streetscape Elevations.** In some cases, a rendered streetscape elevation may be required. The elevation may need to show all of the buildings on the block, including the proposed new building. This elevation should be no less than 1/8" scale and should be in color. An additional plan sheet might include building elevations that are color-coordinated to show the setback from the street (0 to 5 feet, 5 to 10 feet, etc.).
 - E. **Comparative Building Study.** In some cases, a comparison to existing buildings will be required. This will assist in visualizing the size of a building in comparison to other well-known buildings of a similar size in the City. The City will soon have scale drawings of several well-known buildings available for use at Design Review Commission, Planning Commission and City Council meetings.
 - F. **Size, Bulk and Scale Analysis Tools.** Technical Appendix B of the El Pueblo Viejo Landmark District Guidelines describes the following analysis methods, which may be required for projects in any area of the City on a case by case basis by the HLC:
 1. Setback Evaluation Analysis
 2. Envelope Analysis
 3. Perspective Analysis or 3-D Drawing (items 6.4.B and 6.4.C above, also describe these analysis methods).

APPENDIX A

City of Santa Barbara

LANDSCAPE DESIGN STANDARDS FOR WATER CONSERVATION

Adopted August 12, 2008

I. **INTRODUCTION**

It is the policy of the city of Santa Barbara to promote water conservation. Santa Barbara Municipal Code Chapter §22.80 requires the adoption of the Landscape Design Standards for Water Conservation ("Landscape Design Standards.") These Landscape Design Standards are intended to promote water conservation while allowing the maximum possible flexibility in designing attractive and cost effective water-wise landscapes. The Landscape Design Standards were adopted by the Council of the city of Santa Barbara on June 27, 1989 as Resolution No. 89-077, and were updated on August 12, 2008 as Resolution No. 08-083.

II. **DEFINITIONS**

- A. Landscaped Area: All areas where new or altered landscaping is proposed as a part of a development proposal.
- B. Water Wise Plants: Those plants that are evaluated as needing "low" (10-30% ETo) or "very low" (<10% ETo) amounts of irrigation water as defined and listed by Water Use Classifications of Landscape Species (WUCOLS) at <http://www.owue.water.ca.gov/docs/wucols00.pdf> or other sources of water-wise plant water use classifications as verified by a licensed landscape architect.
- C. Turf: A groundcover surface of mowed grass, with an irrigation water need of >30% ETo.
- D. Weather Based Irrigation Controller: An irrigation controller that automatically adjusts the irrigation schedule based on changes in the weather.
- E. Design Review Body: The Architectural Board of Review, Historic Landmarks Commission or the Single Family Design Board.
- F. Public Works Director: The Director of the Public Works Department or his or her designee.
- G. Landscape Plan: Design plans with a planting plan, an irrigation plan, or BOTH.

III. **APPLICABILITY**

Compliance with these landscape design standards is mandatory for all new or altered landscaping proposed as a part of projects that are subject to review by any design review body. (SBMC §22.80.020)

IV. **COMPLIANCE REQUIREMENTS**

Applicants proposing new or altered landscaping shall comply with each of the following requirements in the design, installation, and maintenance of the landscaped area, unless an exception is granted pursuant to Section V.

A. **Landscape Plan:** Applicants shall submit a landscape plan depicting the landscaped area and all existing landscaping to remain on the lot as determined by the Community Development Department.

B. **Turf and Water Wise Plants:**

1. The landscaped area of projects proposing exclusively commercial uses shall be designed without the use of turf and with 100% water wise plants.
2. The landscaped area of single family residential, multi-family residential, mixed-use, and institutional type projects shall be designed with no more than 20% of the landscaped area planted in turf or plants that are not water-wise plants.
3. Turf is not permitted in parkways, medians or other areas within the landscaped area with any dimension of less than eight feet. Turf shall not be used on slopes of 20% or greater within the landscaped area.
4. Notwithstanding requirements 1 and 2 above, additional turf areas may be recommended by the design review body to the Public Works Director for approval for areas designed and used for outdoor sporting and recreational activities.

C. **Mulch:**

The landscaped area, except those portions of the landscaped area planted with turf, groundcover, succulents or other low lying shrubs, shall be covered with mulch material to an average thickness of at least three inches throughout, except in the immediate vicinity of woody trunks. Additional mulch material shall be added from time to time as necessary in order to maintain the required depth of mulch.

D. **Irrigation:**

All new or altered irrigation systems proposed as part of a development proposal shall incorporate the following requirements in their design, installation, and maintenance:

1. Irrigation systems shall be designed and installed to avoid overspray and runoff. Valves shall be separated for individual hydrozones based on plant water needs and sun/shade requirements.

2. In the event that an automatic irrigation system is included in the landscape plan, a weather based irrigation controller with a rain shutoff sensor shall be required for the entire irrigation system.
3. Areas less than eight feet wide shall be irrigated only with bubblers, rotating nozzles on pop-up bodies, sub-surface, or drip irrigation.
4. Drip irrigation shall be provided on at least 25% of the landscaped area.
5. All sprinklers shall have matched precipitation rates within each valve and circuit. All irrigation systems shall be designed to include optimum distribution uniformity, head-to-head spacing and setbacks from walkways and pavement.
6. All irrigation systems shall provide check valves at the low end of irrigation lines to prevent unwanted draining of irrigation lines.
7. Pressure regulators are required on the irrigation system, unless the Public Works Director determines a pressure regulator is not necessary.

E. Grading:

The grading of the landscaped area shall be designed, conducted, and maintained in order to achieve the following goals:

1. The grading shall encourage water retention and infiltration by preserving open space and creating depressed areas/swales.
2. The grading shall mimic natural, pre-development hydrologic flow paths.
3. The grading shall maintain and/or increase the width of flow paths in order to decrease flow rates.

V. EXCEPTIONS

Exceptions to these landscape design standards may be granted by the Public Works Director upon a finding that the exception will promote equivalent or greater water conservation than is provided for in the landscape design standards. Requests for exceptions shall be in writing and shall be submitted to the Public Works Director at the time the application is submitted to the design review body. The design review body may make a recommendation to the Public Works Director for consideration of an exception based on plant selection.

VI. SUBMITTALS

- A. Applicants shall provide all relevant information on the landscape plan, including botanical names for plant and turf species, percentage calculations of allowable areas of turf, medium or high water use plants, and water-wise plants, and specific requests for any exception to the requirements of these Landscape Design Standards. Requests for exceptions must be accompanied by documentation demonstrating that the finding of equivalent or greater water conservation can be made. Areas of existing landscaping to remain unaltered shall be indicated on the landscape plan.

- B. The landscape plan shall be prepared in accordance with the provisions of the California Business and Professions Code relating to the practice of landscape architecture (Business and Professions Code §5641 et seq.).
- C. The landscape plan shall include a “Statement of Compliance” in a form approved by the City certifying that the landscape design complies with the mandatory elements of these Landscape Design Standards. The Statement of Compliance shall be signed by the person who prepared the plans.

VII. DETERMINATION OF CONFORMING INSTALLATION

The person who prepared the landscape plan shall inspect the installation of the plantings and any irrigation system included in the plan and shall certify in writing that the installation substantially conforms to the approved Landscape Plan.

VIII. COMPLIANCE VERIFICATION

Verification of compliance with the Landscape Design Standards, as applicable, shall be made by the Community Development Department and the design review body in accordance with the following requirements:

- A. No development application shall be scheduled for final approval by the design review body unless the landscape plan contains all required information and a statement of compliance in accordance with Section VI above.
- B. No building permit shall be issued unless the statement of compliance required by Section VI above has been included on the final landscape plan submitted for plan check.
- C. No building permit shall be given a final inspection or issued a certificate of occupancy until the Building Official receives a written determination of conformance as required by Section VII above.

APPENDIX B

CITY OF SANTA BARBARA FIRE PREVENTION BUREAU High Fire Hazard Area Landscape Guidelines *Ordinance #5257*

The following landscape guidelines should be utilized to incorporate fire resistant landscaping on all parcels within the High Fire Hazard area. The guidelines meet the requirements for the Fire Department "Minimum Brush Clearance Standards," per Appendix IIA of the California Fire Code (2001 Edition), as adopted by Ordinance #5257. These standards apply to all parcels within the High Fire Hazard area (See "Minimum Brush Clearance Standards" handout). Fire resistant landscaping with proper plant spacing and maintenance can impede the progress of a wildfire, reduce its intensity, and provide a safe buffer to protect a structure.

Incorporation of the High Fire Hazard Area Landscape Guidelines into the review process will assist the City in complying with existing regulations for vegetation modification, balance the aesthetic beauty of our area, protect our resources, and reduce the risk associated with wildfire and habitat resources.

Guidelines

Landscape plans submitted for review shall include the following:

- A vegetation plan that details existing native vegetation with species name and locations.
- Include on the vegetation plan which plants will be removed or retained.
- Include the method used to remove vegetation (for example: mechanical or hand cutting).
- Landscape plans should include new plantings with species name and specific location of plantings to scale.
- Recommendations for plant placement should be followed as outlined in Table 1.
- Landscape plans must delineate landscape zones around all structures for a distance of 100 feet as follows:

Zone 1 - (0-30 feet from structure)

Zone 2 - (30 to 50 feet from structure)

Zone 3 - (50 to 70 feet from the structure)

Zone 4 - (70 to 100 feet or greater from the structure)

All landscape plant species must be fire resistant (See enclosed Desirable Qualities for Fire Resistant Landscape Plants, Table 2). Certain plant species are considered to be undesirable in the High Fire Hazard area landscape. The enclosed list of Undesirable Plant Species (Table 3) should not be planted within 100 feet of any structure, unless listed otherwise.

Slopes over 20% are at increased risk from wildfire, therefore the Fire Department recommends additional vegetation modification for a total distance of 150-200 feet from any structure.

Many homes in the High Fire Hazard area do not have the space surrounding their property to obtain the 100-foot clearance. Using the above zone concept becomes critical on these properties.

Table 1: Recommendations for Plant Placement

ZONE 1 0 – 30 feet	This area is closest to a structure. It provides the best protection against the high radiant heat that result during a wildfire. Plants should be low growing, irrigated plants. Focus should be on ground covers not more than 12 inches in height or succulents. Use non-flammable materials for paths, patios, and mulch. Trees should not be planted closer than 15 feet from a structure.
ZONE 2 30 – 50 feet	Maintain a reasonably open character in this area. Plant low growing ground covers and succulents resistant to fire. Shrubs up to 3 feet can be planted but should have at least 18 feet spacing between other shrubs or other trees. Shrubs can be planted in clusters not more than 10 feet in diameter, but should have at least 18 feet between clusters. Do not plant shrubs underneath canopy of trees. Trees should be spaced at least 30 feet apart to prevent crowns from touching once fully grown.
ZONE 3 50 – 70 feet	This area should have native and Mediterranean plantings that require irrigation and should not be higher than 4 to 6 feet. Shrubs should be spaced at least 18 feet away from each other. Shrubs can be planted in clusters not more than 10 feet in diameter, but should have at least 18 feet between clusters. Trees should be spaced at least 30 feet apart to prevent crowns from touching once fully grown.
ZONE 4 70 – 100 feet or greater	This zone is furthest from the structure. Plantings once established need no irrigation. There is no limit to height. Shrubs planted in this area should have 18 feet spacing or be planted in clusters with at least 18 feet spacing. Trees can be planted in groups or with individual spacing at least 30 feet from other trees.
SLOPES > 20%	If additional vegetation modification is required on slopes over 20% vegetation should be reduced through thinning of existing plants, pruning, removal of dead material, and removal of fire ladders (Fire ladders exist if a fire's flames can spread from the ground into shrubs and trees up to a house).

Table 2: Desirable Qualities for Fire Resistant Landscape Plants

Plant qualities that are desirable for fire resistant plants are:

- Ability to store water in leaves or stems.
- Produces limited dead and fine material.
- Extensive root systems for controlling erosion.
- Plant has high levels of salt or other non-resinous compounds within its tissues that can contribute to fire resistance.
- Ability to withstand drought.
- Plants that are low growing in form.
- Ability to withstand severe pruning.
- Low levels of volatile oils or resins.
- Ability to resprout after a fire.

Table 3: Undesirable Plant List

Certain plants are considered to be undesirable in the landscape due to characteristics that make them highly flammable. These characteristics can be either physical or chemical. Physical properties would include large amounts of dead material retained within the plant, rough or peeling bark, and the production of profuse amounts of litter. Chemical properties include the presence of volatile substances such as oils, resins, wax, and pitch. Certain native plants are notorious as species containing these volatile substances.

Plants with these characteristics should not be planted in High Fire Hazard areas. They are referred to as target species since their partial or complete removal is a critical part of hazard reduction. The following is a list of plants that should be avoided within the landscape zones defined in Table 1.

UNDESIRABLE PLANT SPECIES

1. <u>Natives</u>	1. <u>Domestics</u>
<i>Adenostoma fasciculatum</i> – Chamise	<i>Acacia</i> species
<i>Adenostoma sparsifolium</i> – Red Shank	<i>Casuarina</i> species - Beefwood
<i>Artemisia californica</i> – California Sagebrush	<i>Cortadera</i> species – Pampas Grass
<i>Baccharis</i> species (low growing form OK)	<i>Cupressus</i> species – Cypress
<i>Eriogonum fasciculatum</i> – Common Buckwheat	<i>Eucalyptus</i> species – Eucalyptus
<i>Olneya tesota</i> - Iron wood	<i>Juniperous</i> species – Juniper (except species which grow less than 1 foot)
	<i>Melaleuca</i> species
	<i>Pennisetum</i> - Fountain Grass
	<i>Pinus</i> species – Pine
	<i>Schinus molle</i> – California pepper tree (within 50 feet of structure)

Other plants may be considered undesirable because of their ability to naturalize and become a pest. These types of plants should be avoided, especially in sensitive riparian or coastal areas where they could become established and compete with native vegetation.

On steep slopes care should be taken to avoid erosion problems created or enhanced by vegetation removal. Deep rooted ground covers and landscape plants should be utilized to hold soil in place. Avoid shallow rooted ground covers. For example, iceplant while an effective ground cover on flat surfaces would be undesirable on a steep slope because its shallow rooted nature may increase erosion when the root zone becomes saturated during heavy rains, exposing bare soil. In areas where target species compromise the total vegetation, partial removal is recommended to obtain Fire Department “Minimum Brush Clearance Requirements.”

City of Santa Barbara Fire Prevention Bureau Automatic Fire Sprinkler Requirements

This information sheet is to make you aware of the enhanced automatic fire sprinkler requirements adopted under Municipal Code 8.04, as part of the City's amendments to the 2007 California Fire Code. Beginning September 11, 2009, the following requirements will be adopted in the city of Santa Barbara.

New Construction: The enhanced sections will require approved fire sprinklers in all new construction, including single family residences and duplexes.

Exception: Detached utility buildings ("U" Occupancies) less than 5000 square feet or less than 500 square feet in the high fire hazard areas.

Additions, Alterations

Commercial: Approved automatic fire sprinklers will be required throughout the building when:

- There is an addition to any building other than a single family residence (R-3 Occupancy).
- A remodel involves greater than 50% of the existing floor area of the structure.
- A change in the occupancy use to a higher hazard classification.

Residential: Approved automatic fire sprinklers will be required when:

- An addition or remodel exceeds 75% of the existing floor area of the structure.

Floor Area Computation Square footage computations are per the 2007 California Building Code in accordance with §1002.1, "Floor Area, Gross".

Aggregate Floor area computations shall be counted in the aggregate for both commercial and residential remodels / additions from the effective date of this ordinance.

*NFPA does not allow for partially sprinklered buildings.

Questions about these requirements may be directed to the Santa Barbara City Fire Department, **Fire Prevention Bureau**, at **805-564-5702**. Please also see our website at: <http://www.santabarbaraca.gov/Government/Departments/Fire/>

APPENDIX C

Cal-IPC List of Exotic Plants of Greatest Ecological Concern in California

The following information has been excerpted from the California Invasive Plant Council (Cal-IPC) website, www.cal-ipc.org, last updated 2/07. Species of concern are sorted alphabetically and “high”, “moderate” and “limited” invasive statuses are listed for each plant. Additional recommendations for local invasive species to avoid according to local plant experts are noted on this list.

Key to plant list:

- Bold** The species has invaded the Southwest California ecological region, in which Santa Barbara is located. For more information, see: www.cal-ipc.org/ip/inventory/pdf/Inventory2006.pdf
- !** “Alert” status has been issued by the Cal-IPC.
-  Local plant experts have expressed concern regarding the invasiveness of this species.
-  Local plant experts have expressed concern regarding the invasiveness of this species near sensitive habitats such as creeks.
- Shaded** Plants typically available for sale

Cal-IPC Invasive Status Definitions

High. These species have severe ecological impacts on physical processes, plant and animal communities, and vegetation structure. Their reproductive biology and other attributes are conducive to moderate to high rates of dispersal and establishment. Most are widely distributed ecologically.

Moderate. These species have substantial and apparent—but generally not severe—ecological impacts on physical processes, plant and animal communities, and vegetation structure. Their reproductive biology and other attributes are conducive to moderate to high rates of dispersal, though establishment is generally dependent upon ecological disturbance. Ecological amplitude and distribution may range from limited to widespread.

Limited. These species are invasive but their ecological impacts are minor on a statewide level or there was not enough information to justify a higher score. Their reproductive biology and other attributes result in low to moderate rates of invasiveness. Ecological amplitude and distribution are generally limited, but these species may be locally persistent and problematic.

Alert. Specific combinations of section scores that indicate significant potential for invading new ecosystems triggers an Alert designation so that land managers may watch for range expansions.

Plant Species

Invasive Status

	<i>Acacia dealbata</i> (silver wattle)	Moderate
	<i>Acacia melanoxylon</i> (black acacia, blackwood acacia)	Limited
	<i>Aegilops triuncialis</i> (barb goatgrass)	High
	<i>Ageratina adenophora</i> (croftonweed, eupatorium)	Moderate
	<i>Agrostis avenacea</i> (Pacific bentgrass)	Limited
	<i>Agrostis stolonifera</i> (creeping bentgrass)	Limited
	<i>Ailanthus altissima</i> (tree-of-heaven)	Moderate
!	<i>Alternanthera philoxeroides</i> (alligatorweed)	High
	<i>Ammophila arenaria</i> (European beachgrass)	High
👉	<i>Arundo donax</i> (giant reed)	High
!	<i>Asparagus asparagoides</i> (bridal creeper, smilax asparagus)	Moderate
!	<i>Asphodelus fistulosus</i> (onionweed)	Moderate
	<i>Atriplex semibaccata</i> (Australian saltbush)	Moderate
	<i>Avena barbata</i> (slender wild oat)	Moderate
	<i>Avena fatua</i> (wild oat)	Moderate
	<i>Bassia hyssopifolia</i> (fivehook bassia)	Limited
!	<i>Brachypodium distachyon</i> (annual false-brome)	Moderate
	<i>Brassica nigra</i> (black mustard)	Moderate
	<i>Brassica rapa</i> (birdsrape mustard, field mustard)	Limited
	<i>Brassica tournefortii</i> (Saharan mustard, African mustard)	High
	<i>Briza maxima</i> (big quakinggrass, rattlesnakegrass)	Limited
	<i>Bromus diandrus</i> (ripgut brome)	Moderate
	<i>Bromus hordeaceus</i> (soft brome)	Limited
!	<i>Bromus japonicus</i> (Japanese brome)	Limited
	<i>Bromus madritensis</i> ssp. <i>rubens</i> (B. <i>rubens</i>) (red brome)	High
	<i>Bromus tectorum</i> (downy brome, cheatgrass)	High
	<i>Cakile maritima</i> (European sea-rocket)	Limited
!	<i>Cardaria chalepensis</i> (C. <i>draba</i> ssp. <i>chalepensis</i>) (lens-podded whitetop)	Moderate
	<i>Cardaria draba</i> (hoary cress)	Moderate
	<i>Cardaria pubescens</i> (hairy whitetop)	Limited
	<i>Carduus pycnocephalus</i> (Italian thistle)	Moderate
	<i>Carduus tenuifolius</i> (slenderflower thistle)	Limited
	<i>Carpobrotus chilensis</i> (sea-fig, iceplant)	Moderate
	<i>Carpobrotus edulis</i> (Hottentot-fig, iceplant)	High
	<i>Centaurea calcitrapa</i> (purple starthistle)	Moderate
	<i>Centaurea maculosa</i> (C. <i>bibersteinii</i>) (spotted knapweed)	High
	<i>Centaurea melitensis</i> (Malta starthistle, tocalote)	Moderate
	<i>Centaurea solstitialis</i> (yellow starthistle)	High
	<i>Chrysanthemum coronarium</i> (crown daisy)	Moderate
	<i>Cirsium arvense</i> (Canada thistle)	Moderate
	<i>Cirsium vulgare</i> (bull thistle)	Moderate
	<i>Conium maculatum</i> (poison-hemlock)	Moderate
👉	<i>Cortaderia jubata</i> (jubatagrass)	High

Plant Species

	<u>Invasive Status</u>
 <i>Cortaderia selloana</i> (pampasgrass)	High
<i>Cotula coronopifolia</i> (brassbuttons)	Limited
<i>Crataegus monogyna</i> (English hawthorn)	Limited
<i>Cynara cardunculus</i> (artichoke thistle)	Moderate
  <i>Cynodon dactylon</i> (bermudagrass) – esp. flowering varieties	Moderate
<i>Cynosurus echinatus</i> (hedgehog dogtailgrass)	Moderate
<i>Cytisus scoparius</i> (Scotch broom)	High
<i>Cytisus striatus</i> (Portuguese broom, striated broom)	Moderate
<i>Dactylis glomerata</i> (orchardgrass)	Limited
 <i>Delairea odorata</i> (Senecio mikanioides) (Cape-ivy, German-ivy)	
locally – especially invasive when planted near wildlands	High
<i>Descurainia sophia</i> (flixweed, tansy mustard)	Limited
<i>Dipsacus sativus</i> (fuller's teasel)	Moderate
! <i>Dittrichia graveolens</i> (stinkwort)	Moderate
 <i>Echium candicans</i> (pride-of-Madeira)	Limited
<i>Egeria densa</i> (Brazilian egeria)	High
<i>Ehrharta calycina</i> (purple veldtgrass)	High
<i>Ehrharta erecta</i> (erect veldtgrass)	Moderate
! <i>Ehrharta longiflora</i> (long-flowered veldtgrass)	Moderate
!  <i>Eichhornia crassipes</i> (water hyacinth)	High
! <i>Emex spinosa</i> (spiny emex, devil's thorn)	Moderate
<i>Erodium cicutarium</i> (redstem filaree)	Limited
 <i>Eucalyptus camaldulensis</i> (red gum)	Limited
 <i>Eucalyptus globulus</i> (Tasmanian blue gum)	Moderate
! <i>Euphorbia esula</i> (leafy spurge)	High
! <i>Euphorbia terracina</i> (carnation spurge)	Moderate
<i>Festuca arundinacea</i> (tall fescue)	Moderate
 <i>Ficus carica</i> (edible fig)	Moderate
<i>Foeniculum vulgare</i> (fennel)	High
<i>Genista monspessulana</i> (French broom)	High
<i>Geranium dissectum</i> (cutleaf geranium)	Moderate
 <i>Hedera helix</i> , <i>H. canariensis</i> (English ivy, Algerian ivy)	
locally – especially invasive when planted near wildlands	High
<i>Hirschfeldia incana</i> (shortpod mustard, summer mustard)	Moderate
<i>Holcus lanatus</i> (common velvetgrass)	Moderate
<i>Hordeum marinum</i> , <i>H. murinum</i> (Medit. barley, hare barley, wall barley)	Moderate
! <i>Hydrilla verticillata</i> (hydrilla)	High
! <i>Hypericum canariense</i> (Canary Island hypericum)	Moderate
 <i>Hypericum perforatum</i> (common St. Johnswort, klamathweed)	Moderate
<i>Hypochaeris glabra</i> (smooth catsear)	Limited
<i>Hypochaeris radicata</i> (rough catsear, hairy dandelion)	Moderate
<i>Iris pseudacorus</i> (yellowflag iris)	Limited

Plant Species

Invasive Status

	<i>Lepidium latifolium</i> (perennial pepperweed, tall whitetop)	High
	<i>Leucanthemum vulgare</i> (oxeye daisy)	Moderate
	<i>Linaria genistifolia</i> ssp. <i>dalmatica</i> (L. <i>dalmatica</i>) (Dalmation toadflax)	Moderate
!	<i>Linaria vulgaris</i> (Yellow toadflax)	Moderate
	<i>Lobularia maritima</i> (sweet alyssum)	Limited
	<i>Lolium multiflorum</i> (Italian ryegrass)	Moderate
!	<i>Ludwigia hexapetala</i> (L. <i>uruguayensis</i>) (Uruguay water-primrose)	High
	<i>Ludwigia peploides</i> ssp. <i>montevidensis</i> (creeping water-primrose)	High
	<i>Lythrum hyssopifolium</i> (hyssop loosestrife)	Limited
	<i>Lythrum salicaria</i> (purple loosestrife)	High
	<i>Marrubium vulgare</i> (white horehound)	Limited
	<i>Medicago polymorpha</i> (California burclover)	Limited
	<i>Mentha pulegium</i> (pennyroyal)	Limited
!	<i>Mesembryanthemum crystallinum</i> (crystalline iceplant)	Moderate
☞	<i>Myoporum laetum</i> (myoporum)	Moderate
	<i>Myosotis latifolia</i> (common forget-me-not)	Limited
!	<i>Myriophyllum aquaticum</i> (parrotfeather)	High
	<i>Myriophyllum spicatum</i> (Eurasian watermilfoil)	Moderate
	<i>Nicotiana glauca</i> (tree tobacco)	Moderate
	<i>Olea europaea</i> (olive) – esp. <i>fruiting varieties</i>	Limited
	<i>Onopordum acanthium</i> (Scotch thistle)	Moderate
	<i>Oxalis pes-caprae</i> (buttercup oxalis, yellow oxalis, Bermuda buttercup)	Moderate
	<i>Parentucellia viscosa</i> (yellow glandweed, sticky parentucellia)	Limited
☞	≈ <i>Pennisetum clandestinum</i> (kikuyugrass)	Limited
☞	<i>Pennisetum setaceum</i> (crimson fountaingrass)	Moderate
	<i>Phalaris aquatica</i> (hardinggrass)	Moderate
☞	<i>Phoenix canariensis</i> (Canary Island date palm) <i>only of local concern near wild lands, especially of concern near wetlands.</i>	Limited
!	<i>Phytolacca americana</i> (Common pokeweed)	Limited
	<i>Picris echioides</i> (bristly oxtongue)	Limited
	<i>Piptatherum miliaceum</i> (smilograss)	Limited
	<i>Plantago lanceolata</i> (buckhorn plantain, English plantain)	Limited
	<i>Poa pratensis</i> (Kentucky bluegrass)	Limited
	<i>Polypogon monspeliensis</i> and <i>subsp.</i> (rabbitfoot polypogon, annual beardgrass, rabbitfoot grass)	Limited
	<i>Potamogeton crispus</i> (curlleaf pondweed)	Moderate
	<i>Pyracantha angustifolia</i> , <i>P. crenulata</i> , <i>P. coccinea</i> , etc. (pyracantha, firethorn)	Limited
	<i>Ranunculus repens</i> (creeping buttercup)	Limited
	<i>Raphanus sativus</i> (radish)	Limited
!	<i>Retama monosperma</i> (bridal broom)	Moderate
	<i>Ricinus communis</i> (castorbean)	Limited
	<i>Robinia pseudoacacia</i> (black locust)	Limited

<u>Plant Species</u>	<u>Invasive Status</u>
<i>Rubus armeniacus</i> (R. discolor) (Himalaya blackberry, Armenian blackberry)	High
<i>Rumex acetosella</i> (red sorrel, sheep sorrel)	Moderate
<i>Rumex crispus</i> (curly dock)	Limited
! <i>Saccharum ravennae</i> (ravennagrass)	Moderate
<i>Salsola paulsenii</i> (barbwire Russian-thistle)	Limited
! <i>Salsola soda</i> (oppositeleaf Russian thistle)	Moderate
<i>Salsola tragus</i> (Russian-thistle)	Limited
! <i>Salvinia molesta</i> (giant salvinia)	Moderate
<i>Saponaria officinalis</i> (bouncingbet)	Limited
<i>Schinus molle</i> (Peruvian or California peppertree)	Limited
<i>Schinus terebinthifolius</i> (Brazilian peppertree)	Limited
<i>Schismus arabicus</i> , <i>S. barbatus</i> (Mediterranean grass)	Limited
<i>Senecio jacobaea</i> (tansy ragwort)	Limited
! <i>Sesbania punicea</i> (red sesbania, scarlet wisteria)	Moderate
<i>Silybum marianum</i> (blessed milkthistle)	Limited
<i>Sinapis arvensis</i> (wild mustard, charlock)	Limited
<i>Sisymbrium irio</i> (London rocket)	Moderate
! <i>Spartina alterniflora</i> hybrids (smooth cordgrass, Atlantic cordgrass)	Moderate
! <i>Spartina densiflora</i> (dense-flowered cordgrass)	Moderate
<i>Spartium junceum</i> (Spanish broom)	Moderate
<i>Taeniatherum caput-medusae</i> (medusahead)	Moderate
<i>Tamarix aphylla</i> (athel tamarisk)	Limited
<i>Tamarix parviflora</i> (smallflower tamarisk)	Moderate
<i>Tamarix ramosissima</i> (saltcedar, tamarisk)	Moderate
<i>Torilis arvensis</i> (hedgeparsley)	Moderate
<i>Trifolium hirtum</i> (rose clover)	Moderate
<i>Ulex europaeus</i> (gorse)	Moderate
<i>Undaria pinnatifida</i> (wakame)	Limited
👉 <i>Vinca major</i> (big periwinkle)	Moderate
<i>Vulpia myuros</i> (rattail fescue)	Moderate
! <i>Washingtonia robusta</i> (Mexican fan palm, Washington palm)	Moderate
<i>Zantedeschia aethiopica</i> (calla lily)	Limited

Additional Plants Considered Invasive by Santa Barbara Landscape Architects

The following plants may be discouraged, especially if near open water courses, parks, the ocean, open spaces, or undeveloped lands.

	Fountain Grasses - in general - Pennisetum genus and especially Pennisetum setaceum	High
	Stipa tenuissifolia (Mexican feather grass)	High
	Pittosporum undulatum (only problematic near wild areas)	Moderate
	Running or Spreading Bamboo Species – in general	Moderate

Check any proposed bamboo to determine if it is a running or spreading species, as this list is not comprehensive. Following are examples of running or spreading bamboos species:

Phyllostachys bambusoides (Castillion)	Moderate
Phyllostachys edulis (Oso bamboo)	Moderate
Phyllostachys nigra (Black bamboo)	Moderate
Pleioblastus pygmaeus (Dwarf bamboo)	Moderate
Pleioblastus viridistriatus (Dwarf greenstripe bamboo)	Moderate
Nandina domestica (Heavenly bamboo)	Limited

	Tropaeolum majus (Nasturtium)- especially near creek areas	Moderate
	Vinca minor (Dwarf Periwinkle)- especially near creek areas	Limited
	Maytenus boaria (Mayten Tree)	Limited

APPENDIX D

LIST OF RECOMMENDED PARKING LOT CANOPY TREES

Bauhinia variegata	Purple Orchid Tree
Cupaniopsis anacardiodes	Carrot Wood Tree
Eucalyptus leucoxylon	White Ironbark
Jacaranda mimosifolia	Jacaranda
Magnolia grandiflora	Southern Magnolia
Metrosideros excelsus	New Zealand Christmas Tree
Pistacia chinensis	Chinese Pistache
Platanus acerifolia	London Plane Tree
Podocarpus gracilior	Fern Pine
